

# HCES 2023-24

## COMPREHENSIVE ANALYSIS

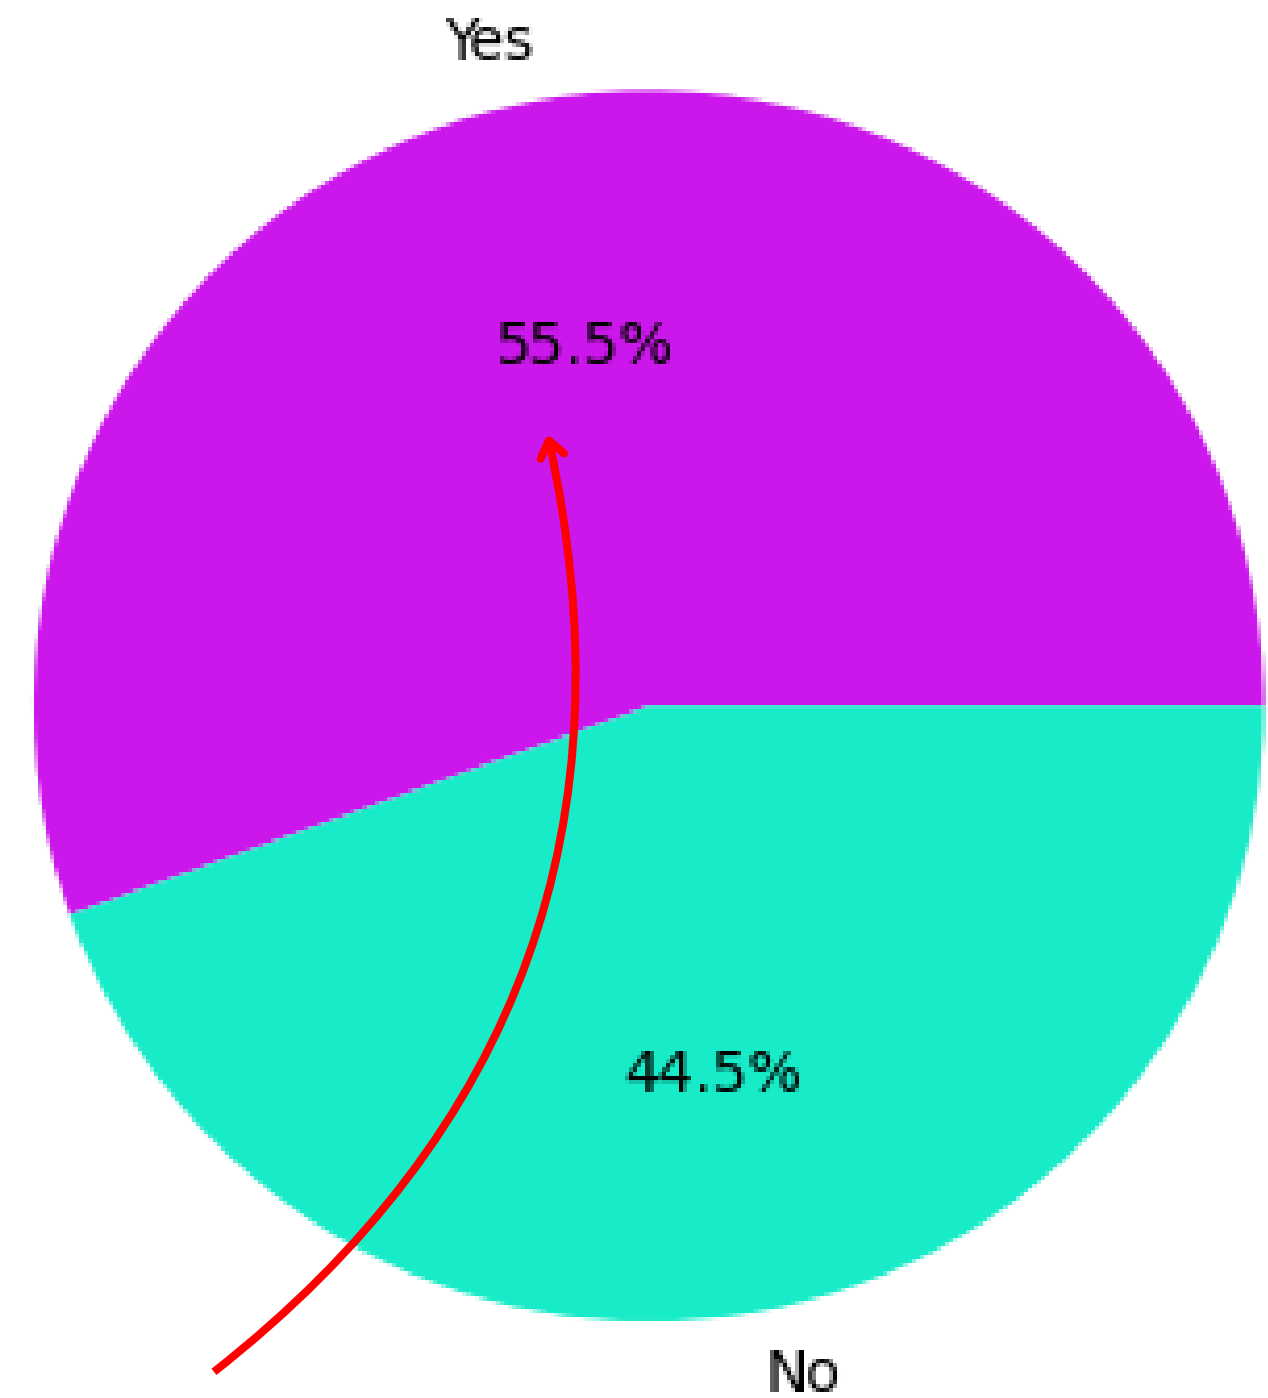

# LEVEL 02: PERSON

Records demographic and personal consumption details for each member of the sampled household.

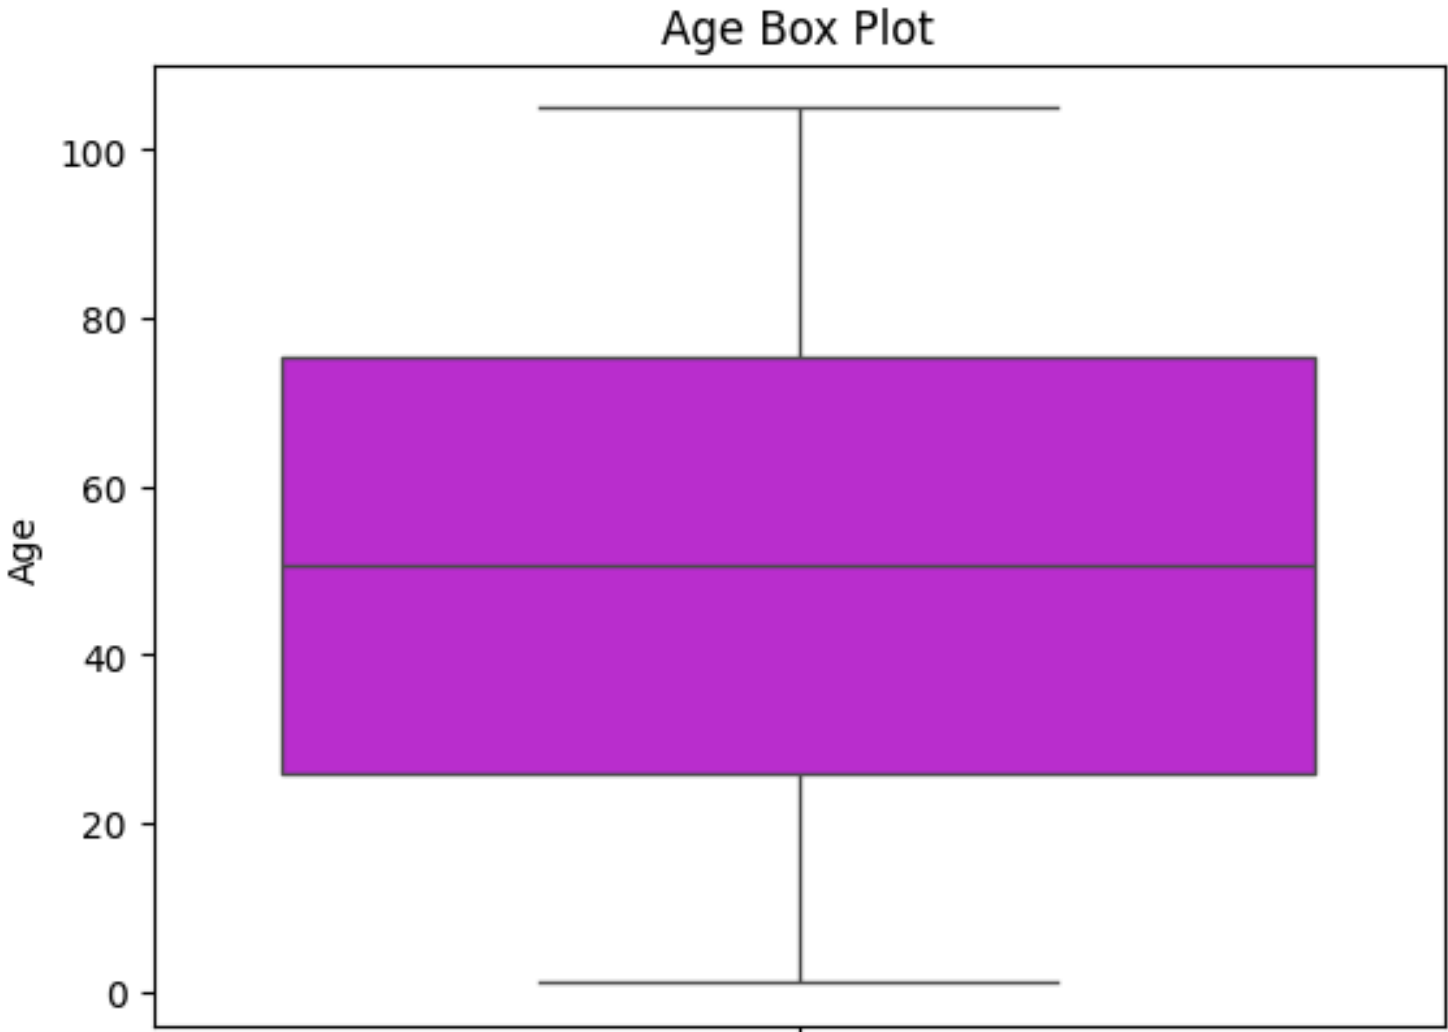

**Author:** Rudra Prasad Bhuyan  
**Position:** Data Analyst Intern  
**Guidance:** Anushka Ashok, Alok Gangaramany

Internet Used in last 30 days

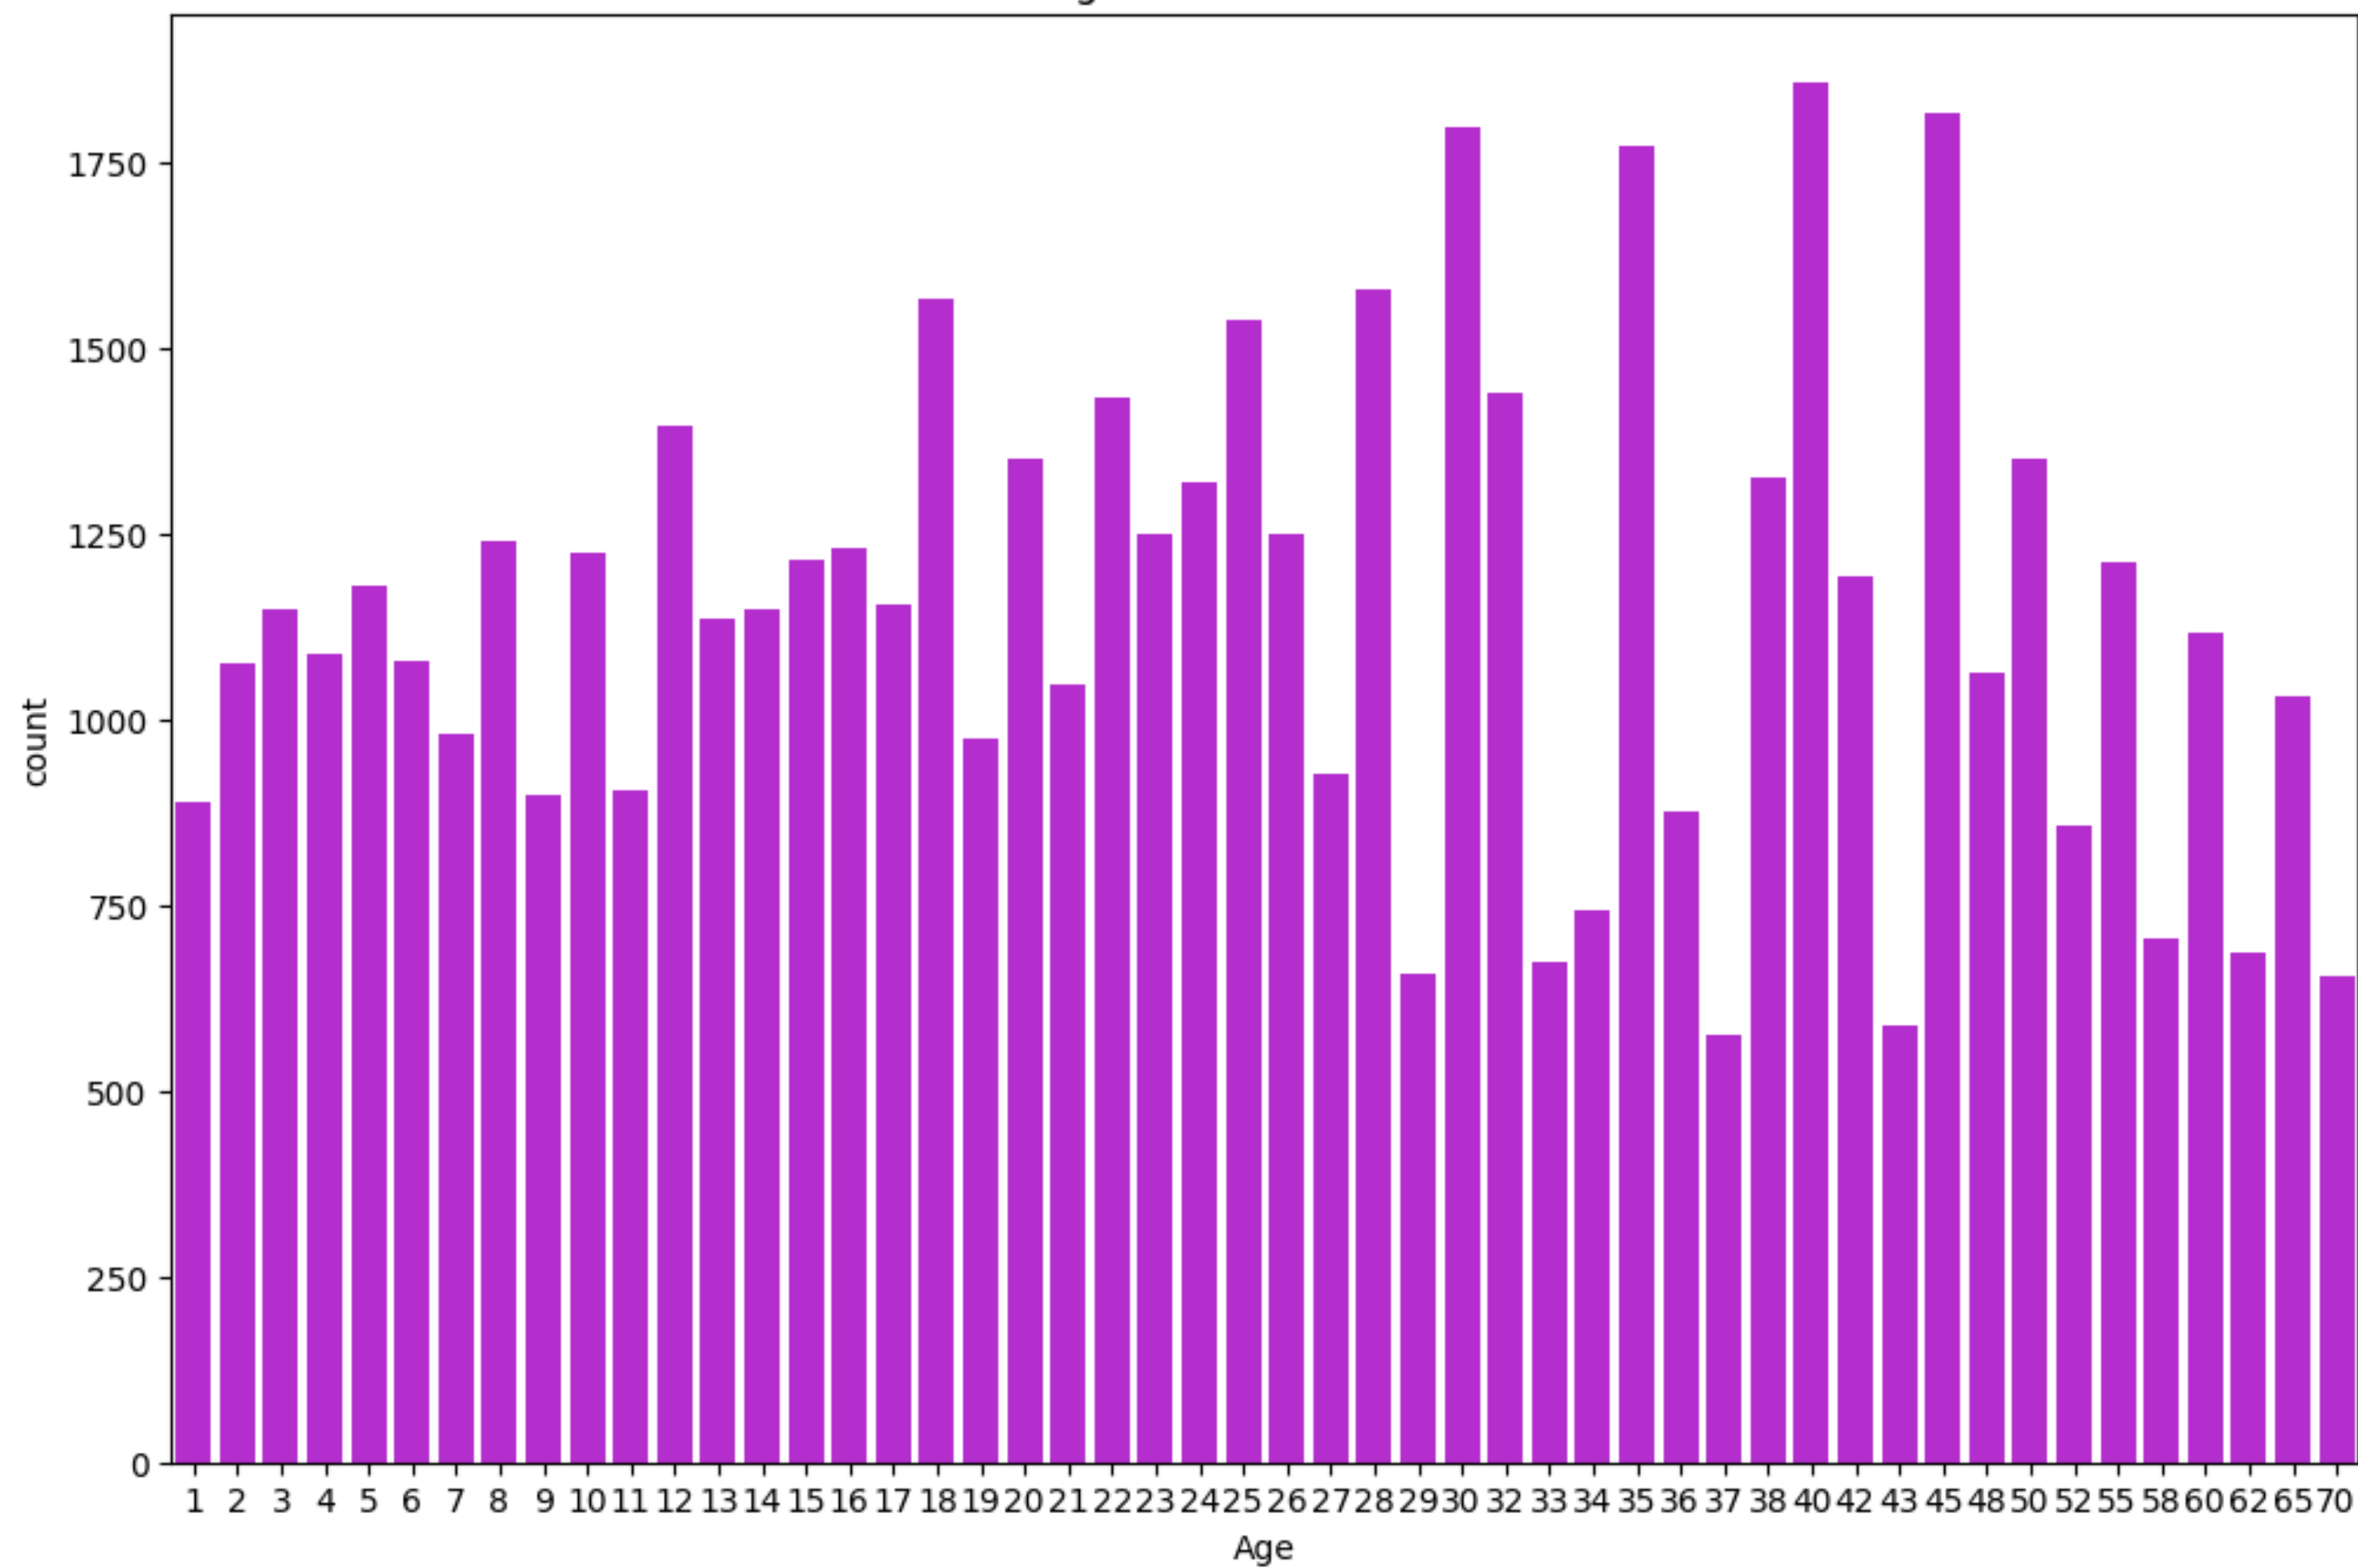

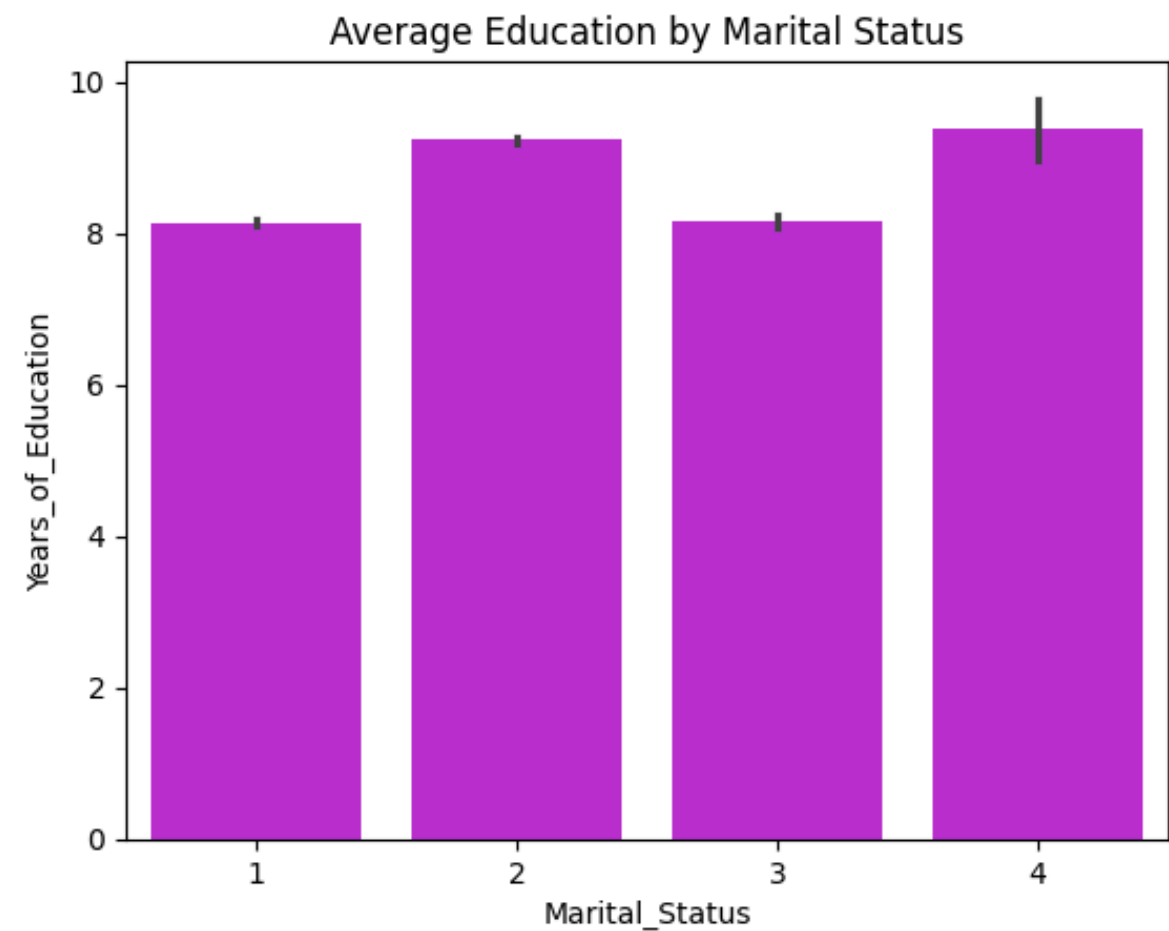

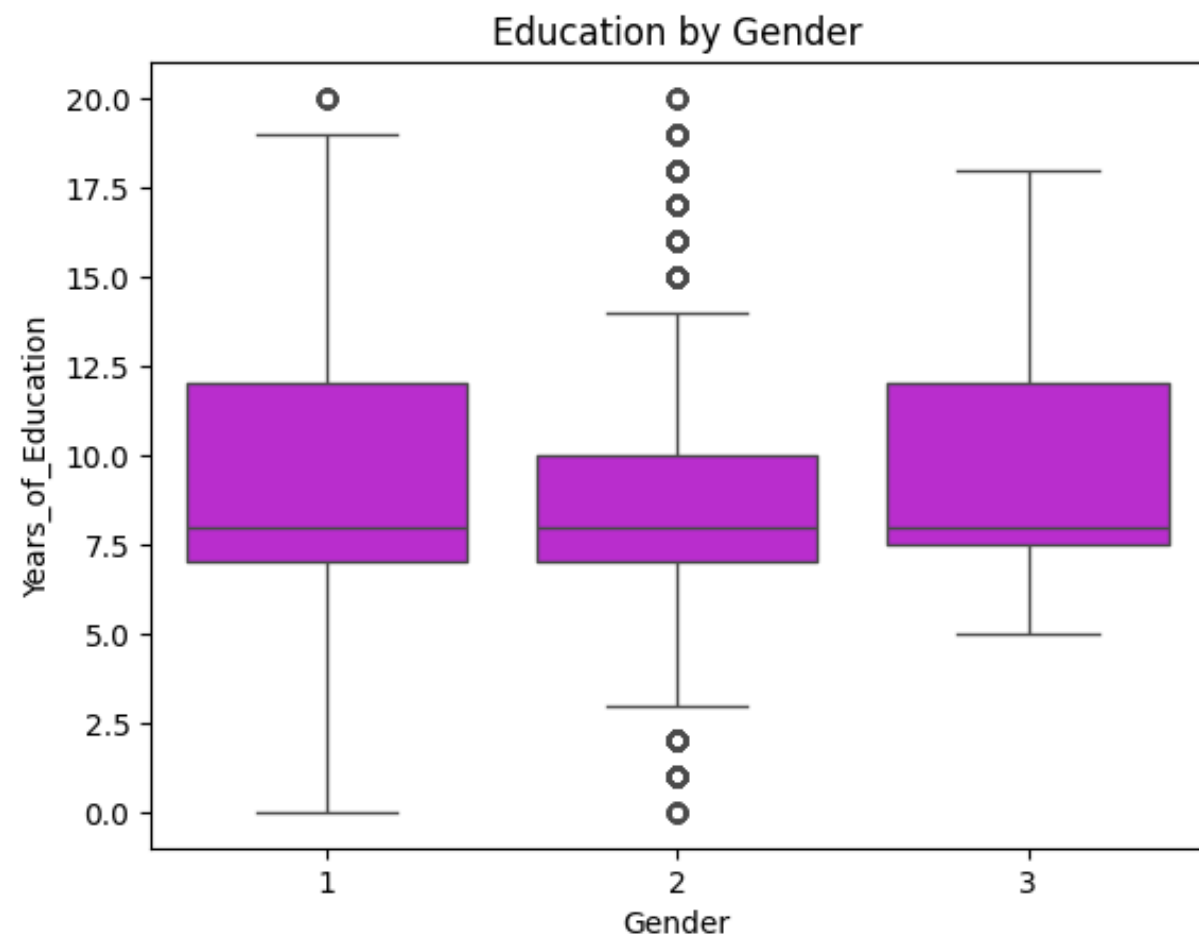

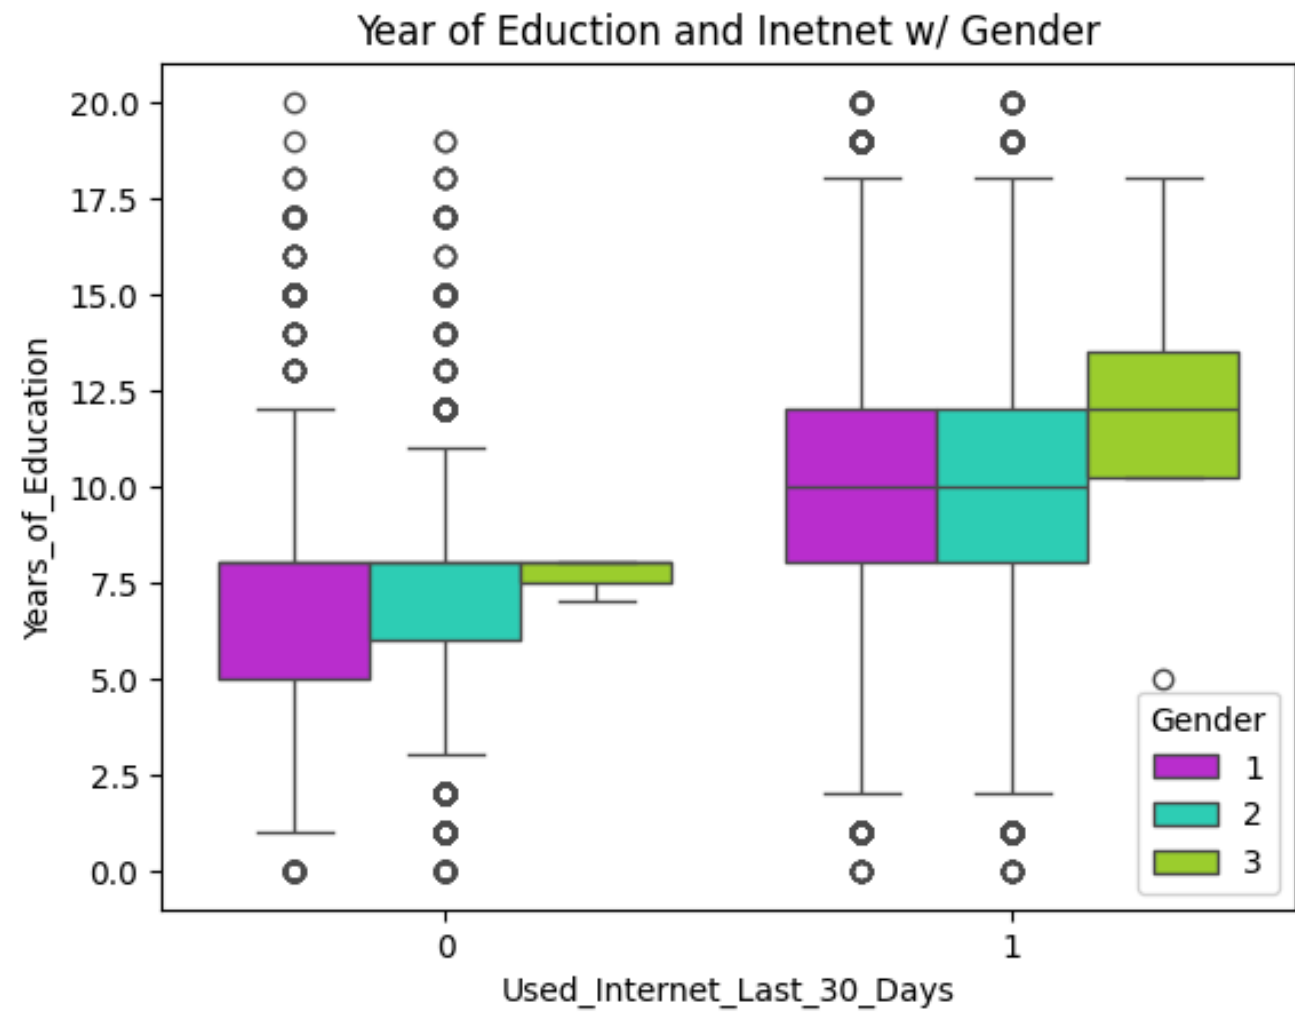

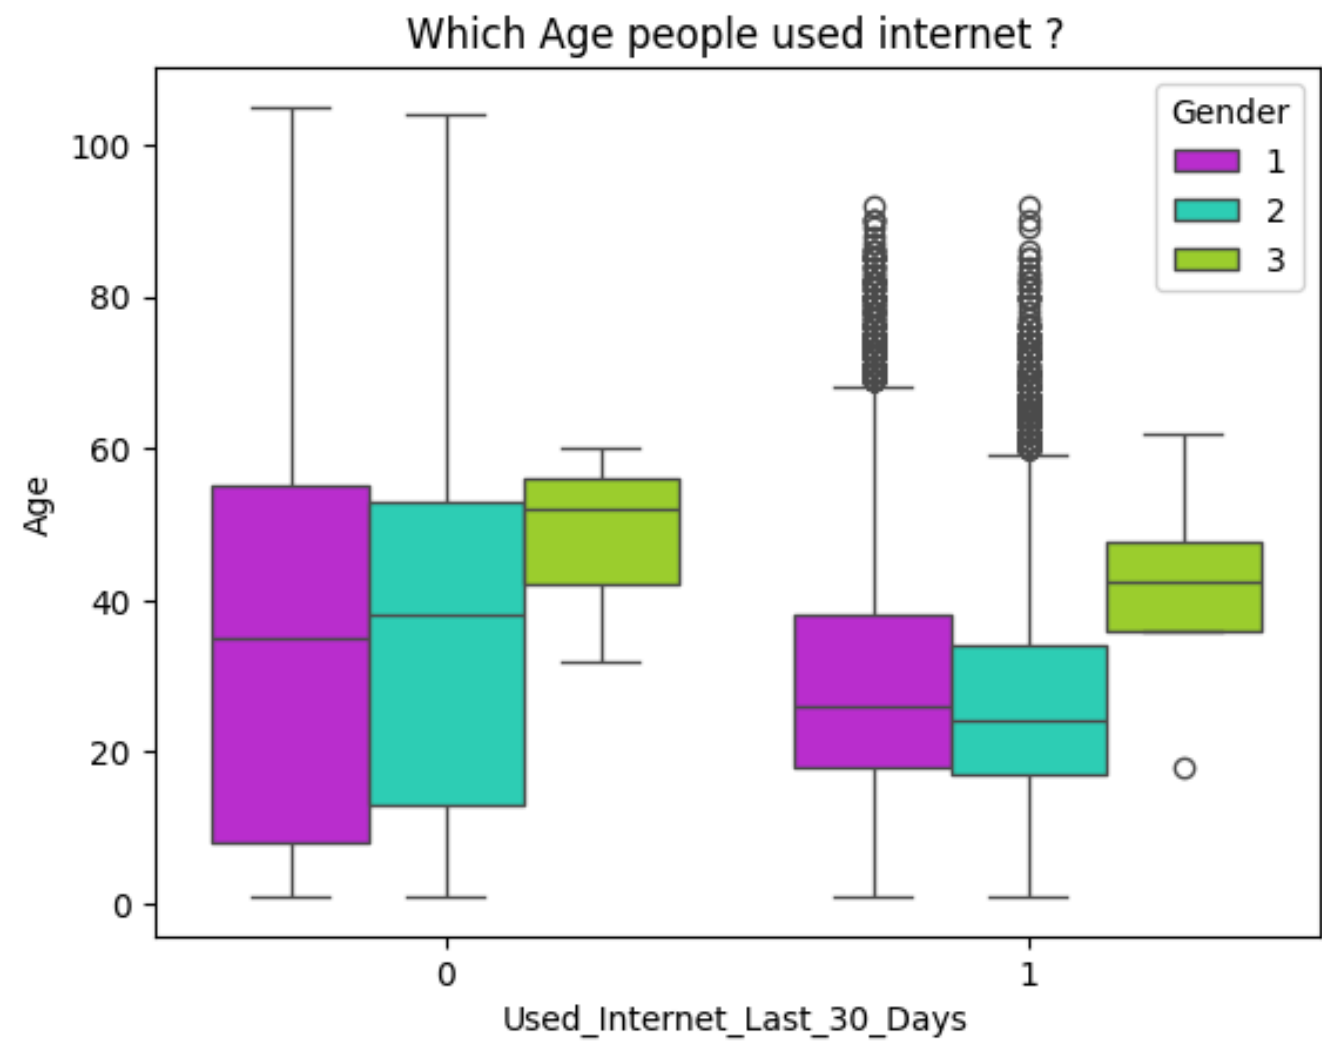

55% People used  
the Internet

| Patameter | %  |
|-----------|----|
| 25%       | 25 |
| 50%       | 50 |
| 75%       | 75 |

Age Distribution in MP

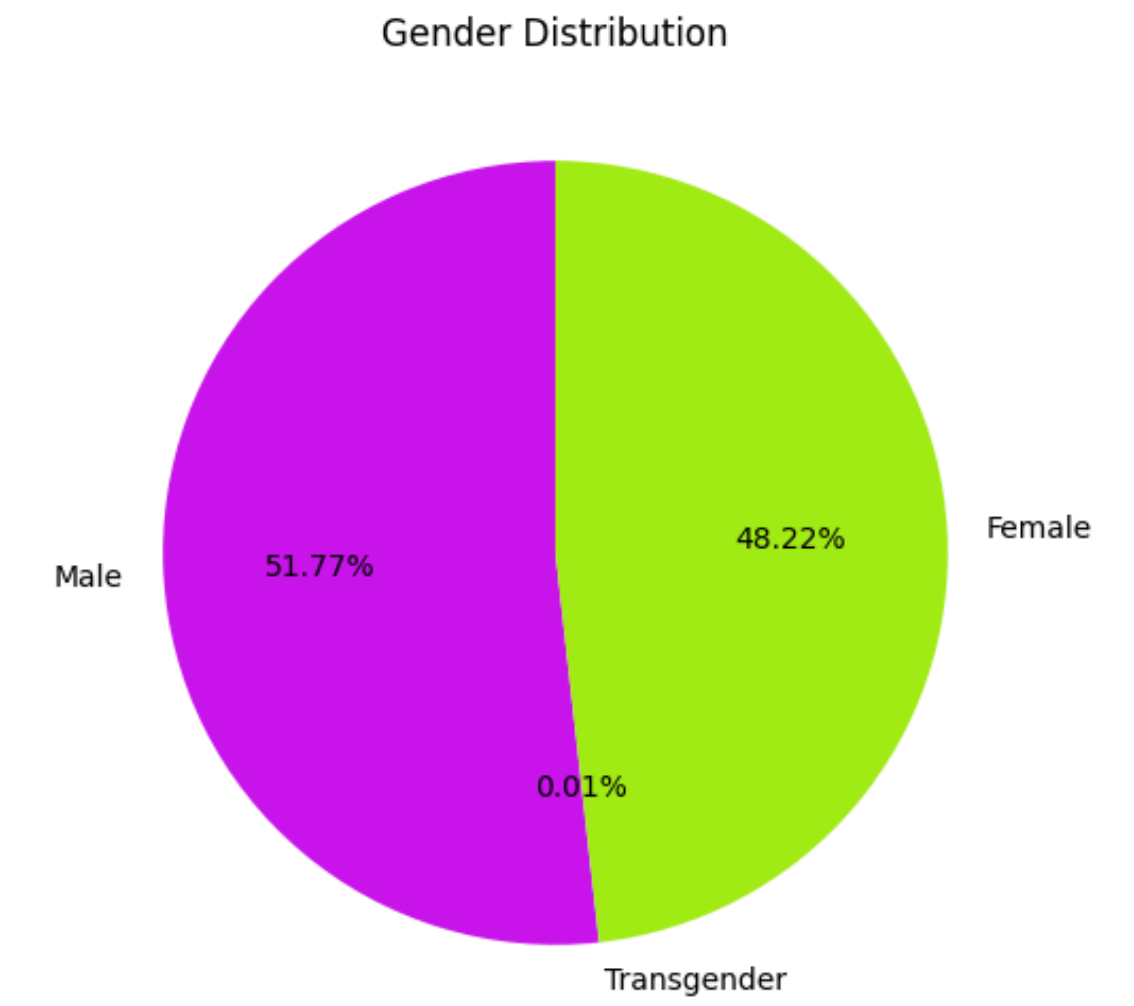

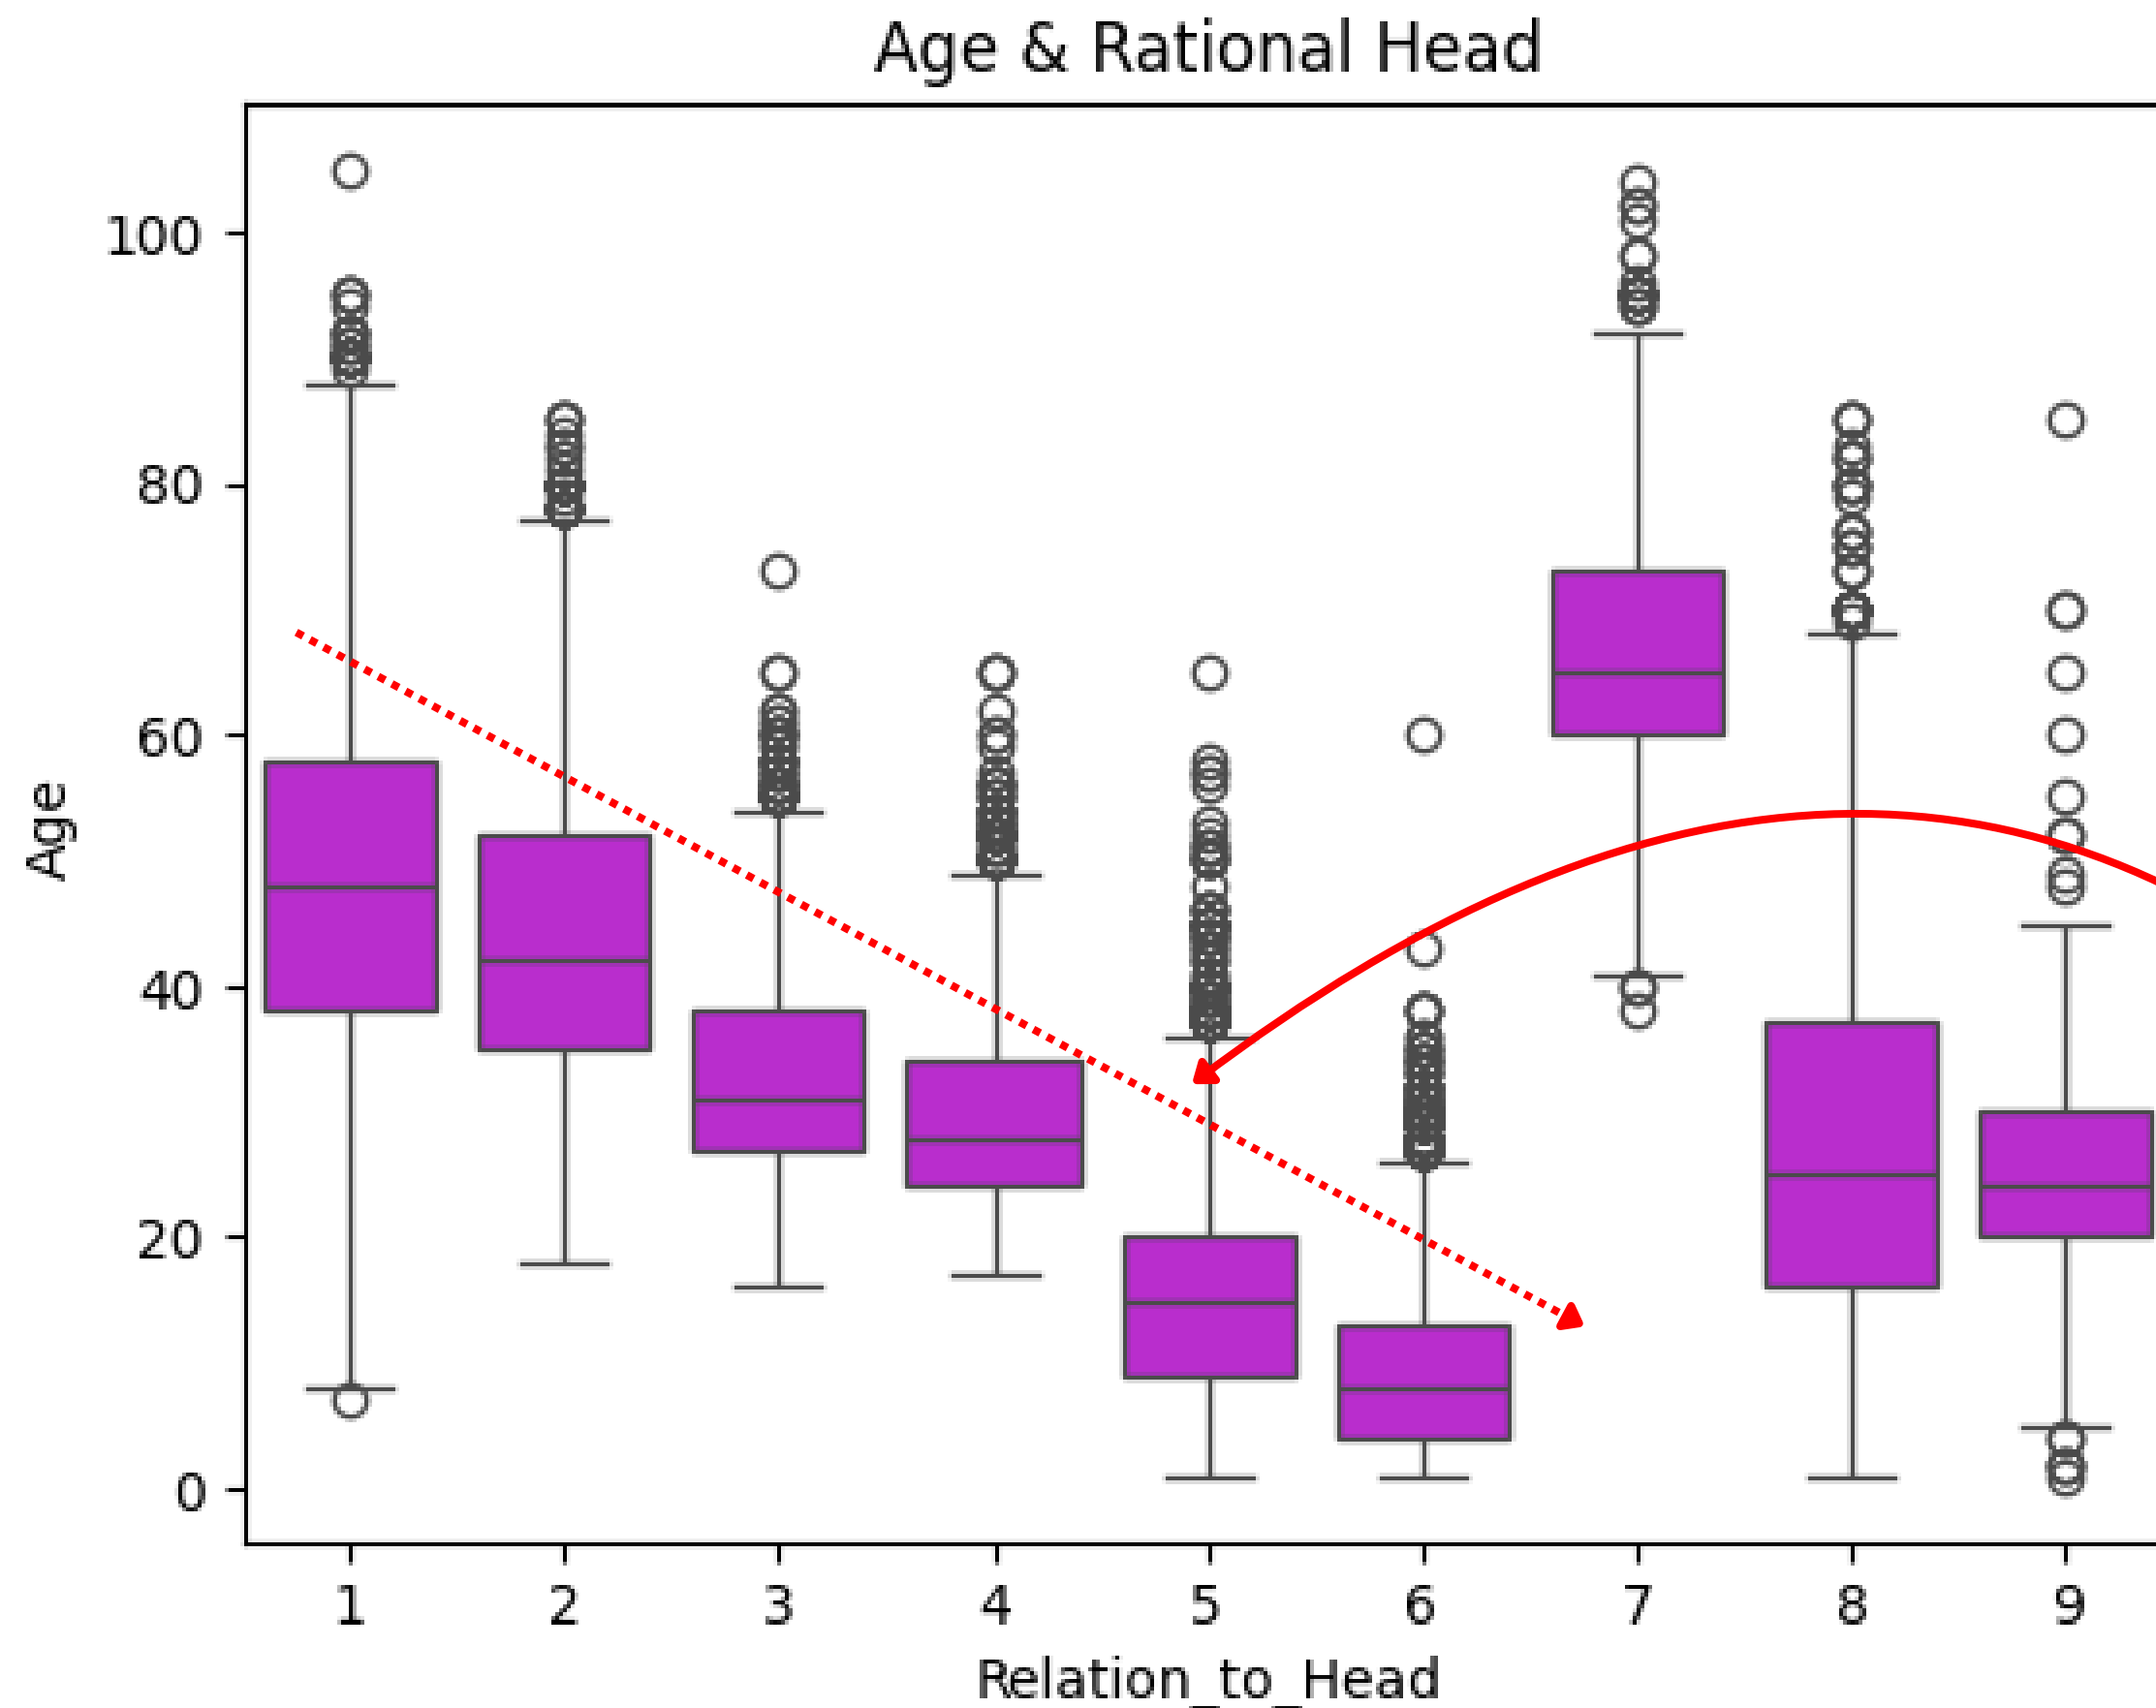

| Patameter | Marital Label      |
|-----------|--------------------|
| 1         | Married            |
| 2         | Unmarried          |
| 3         | Widow              |
| 4         | Divorced/Separated |

| Patameter | Internet Label |
|-----------|----------------|
| 1         | Yes            |
| 0         | No             |

| Patameter | Gender Label |
|-----------|--------------|
| 1         | M            |
| 2         | F            |
| 3         | Transgender  |

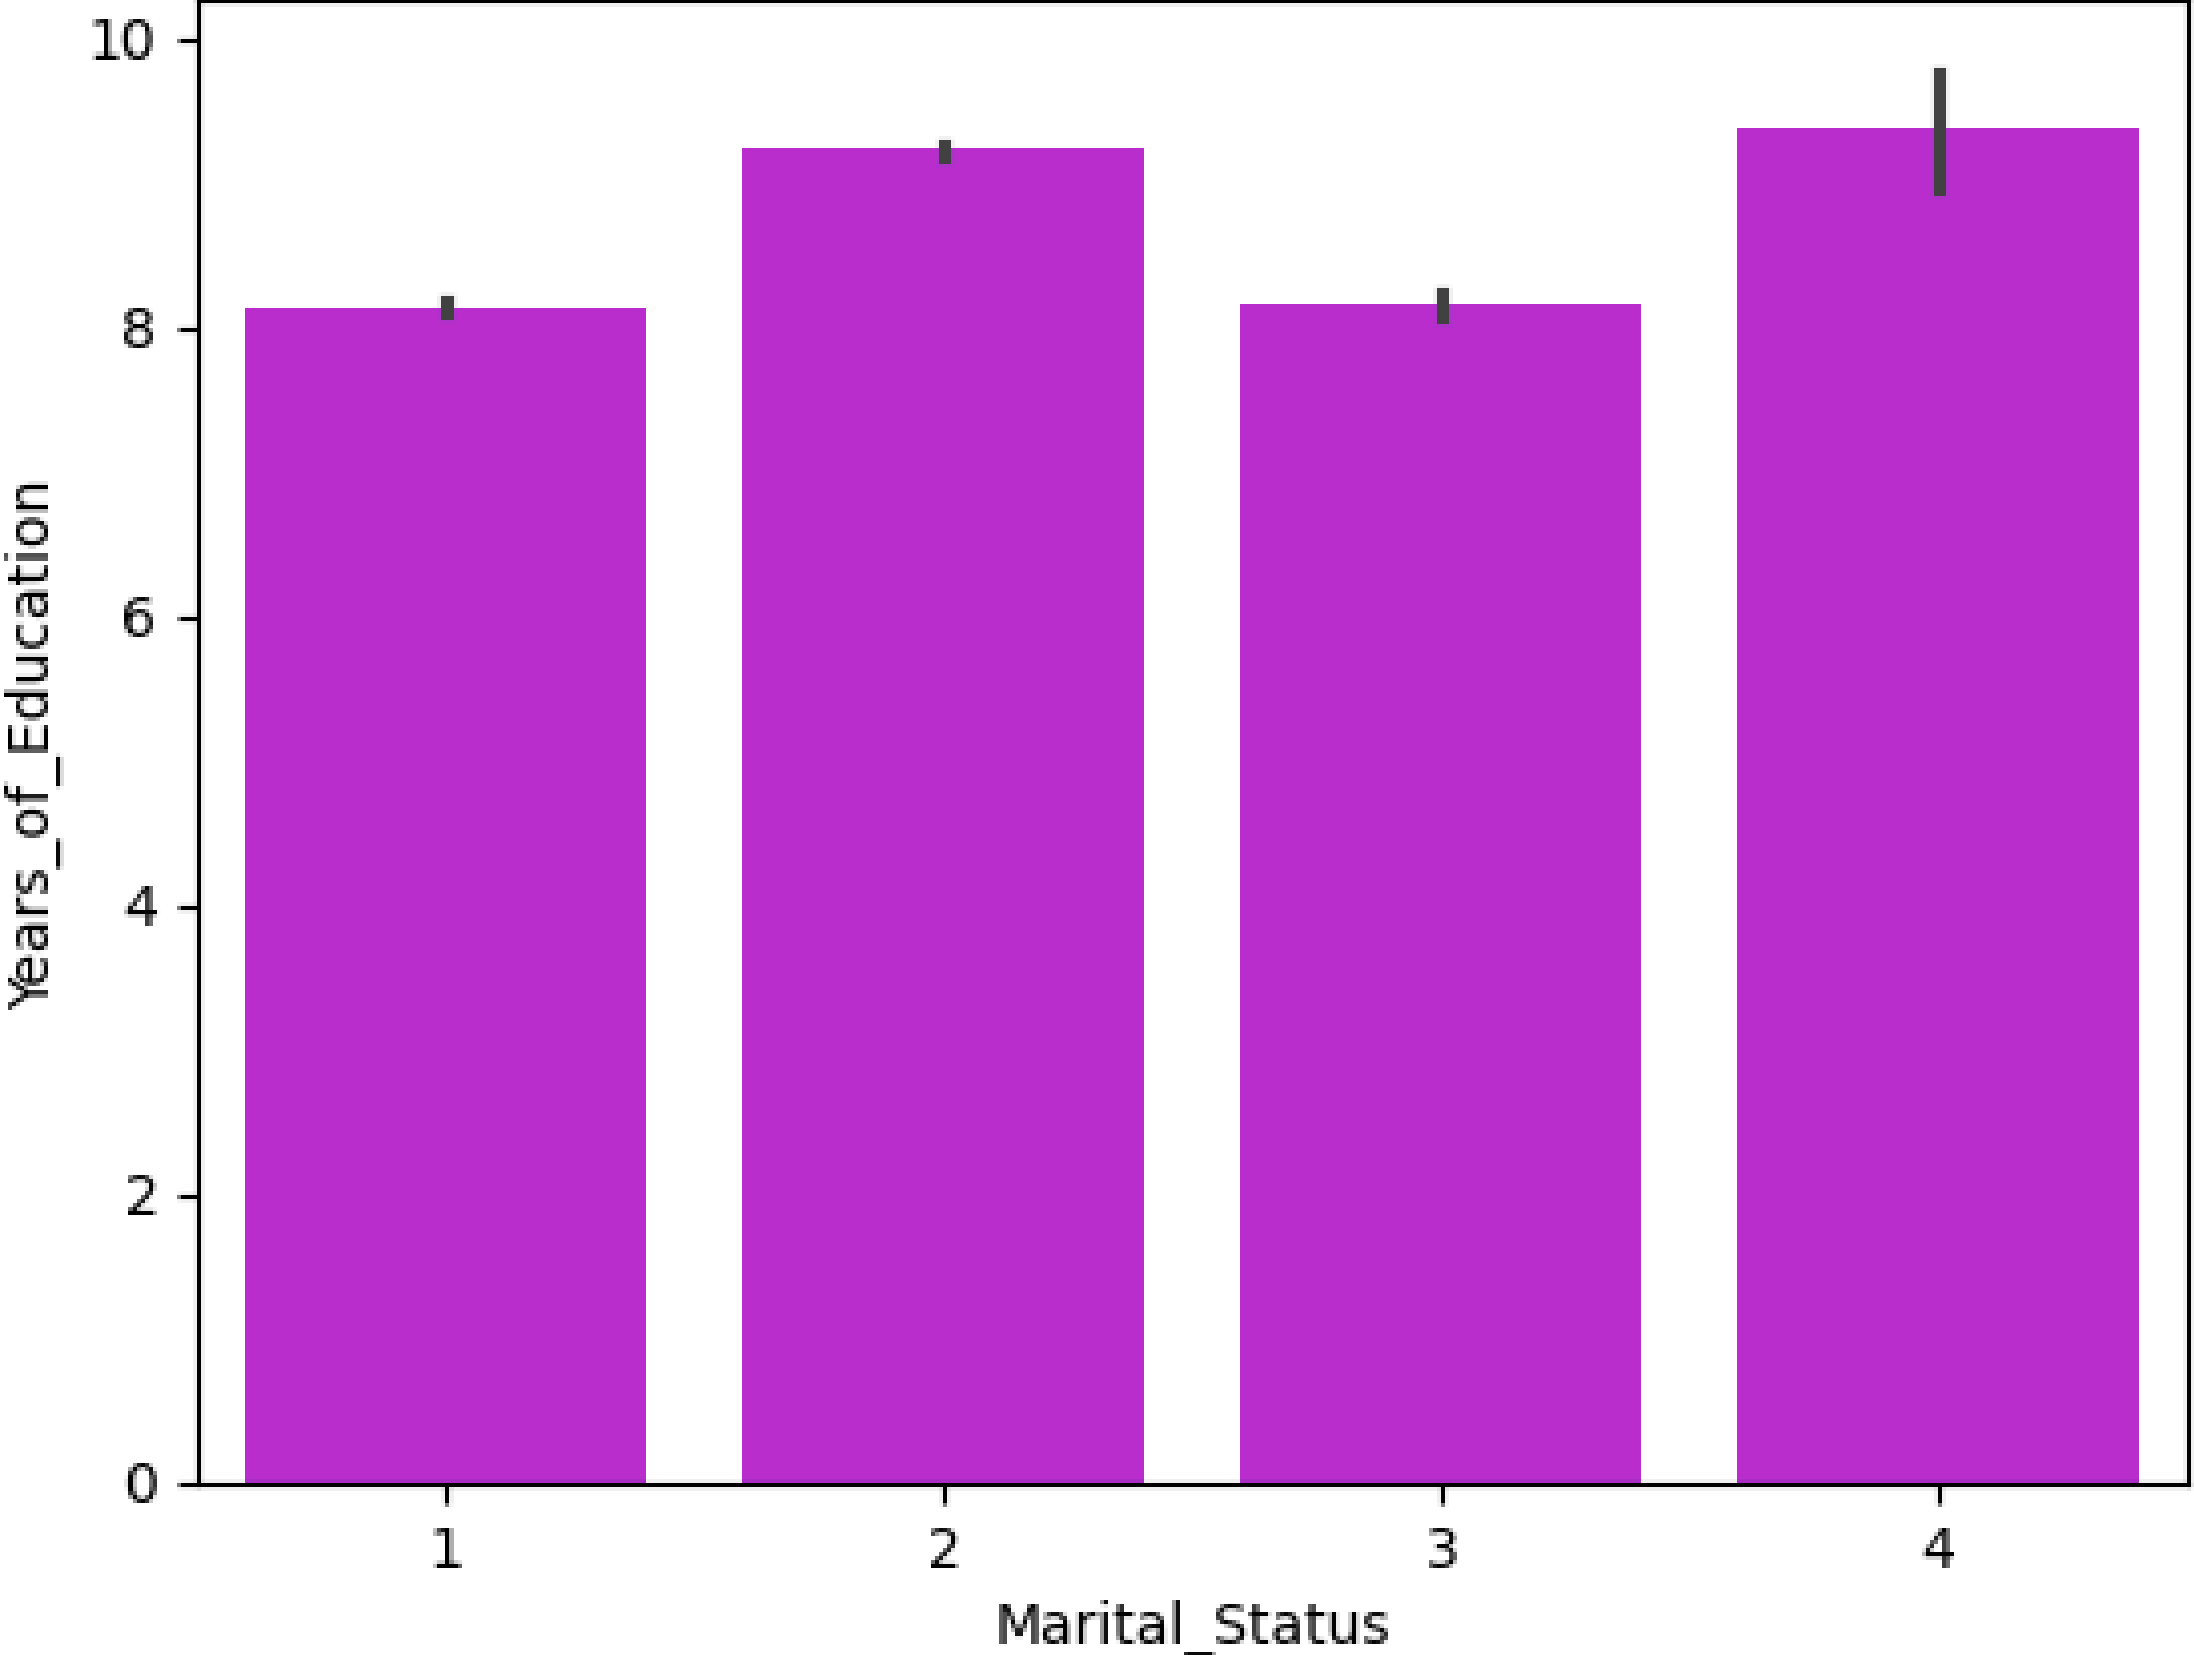

This data set is showing that the age is decreasing as the family member increases

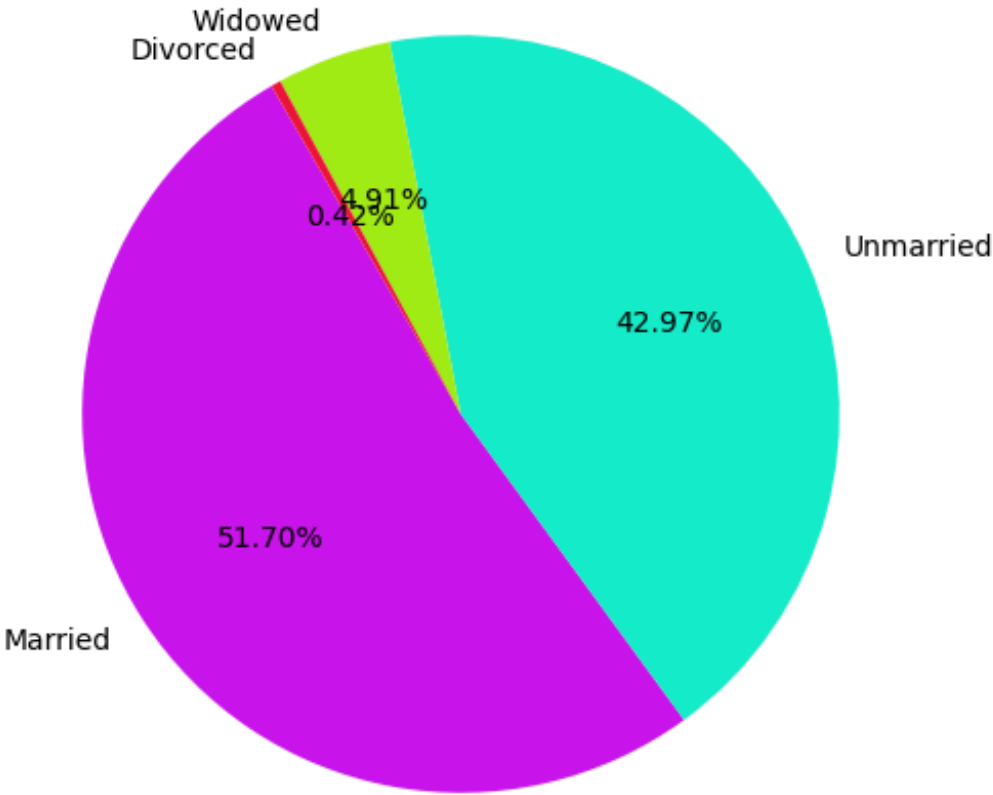

Relationship of the person to the head of the household

Average Education by Marital Status

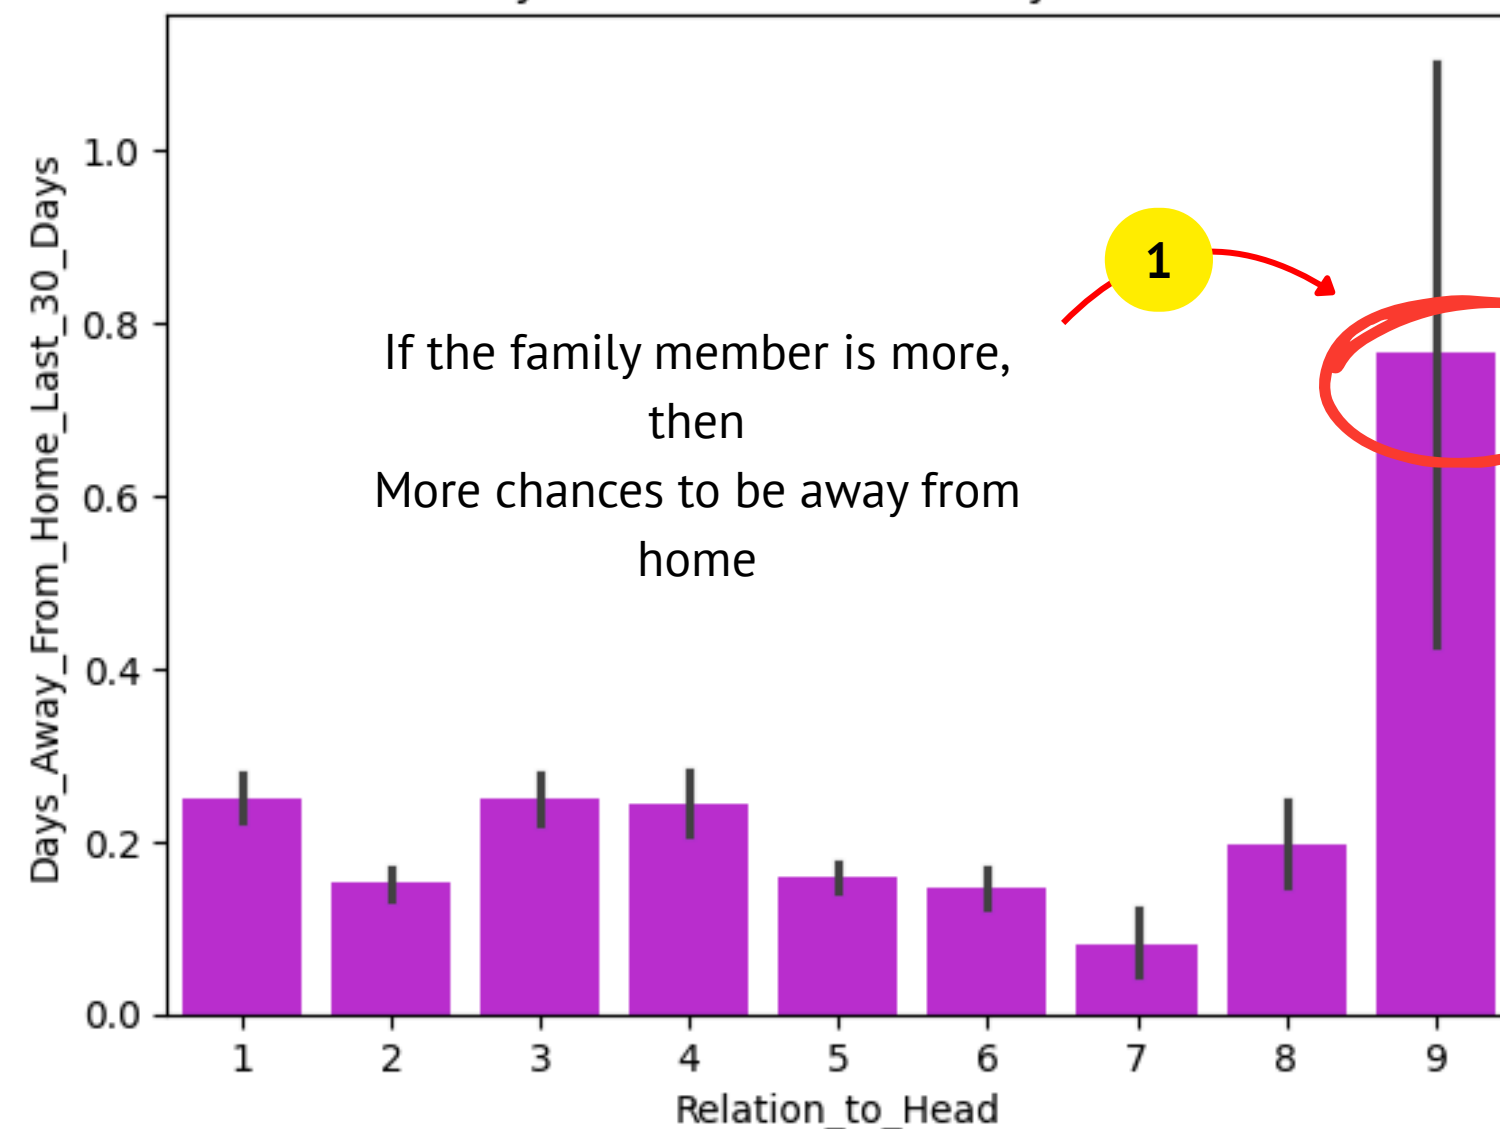

Distribution of Marital Status

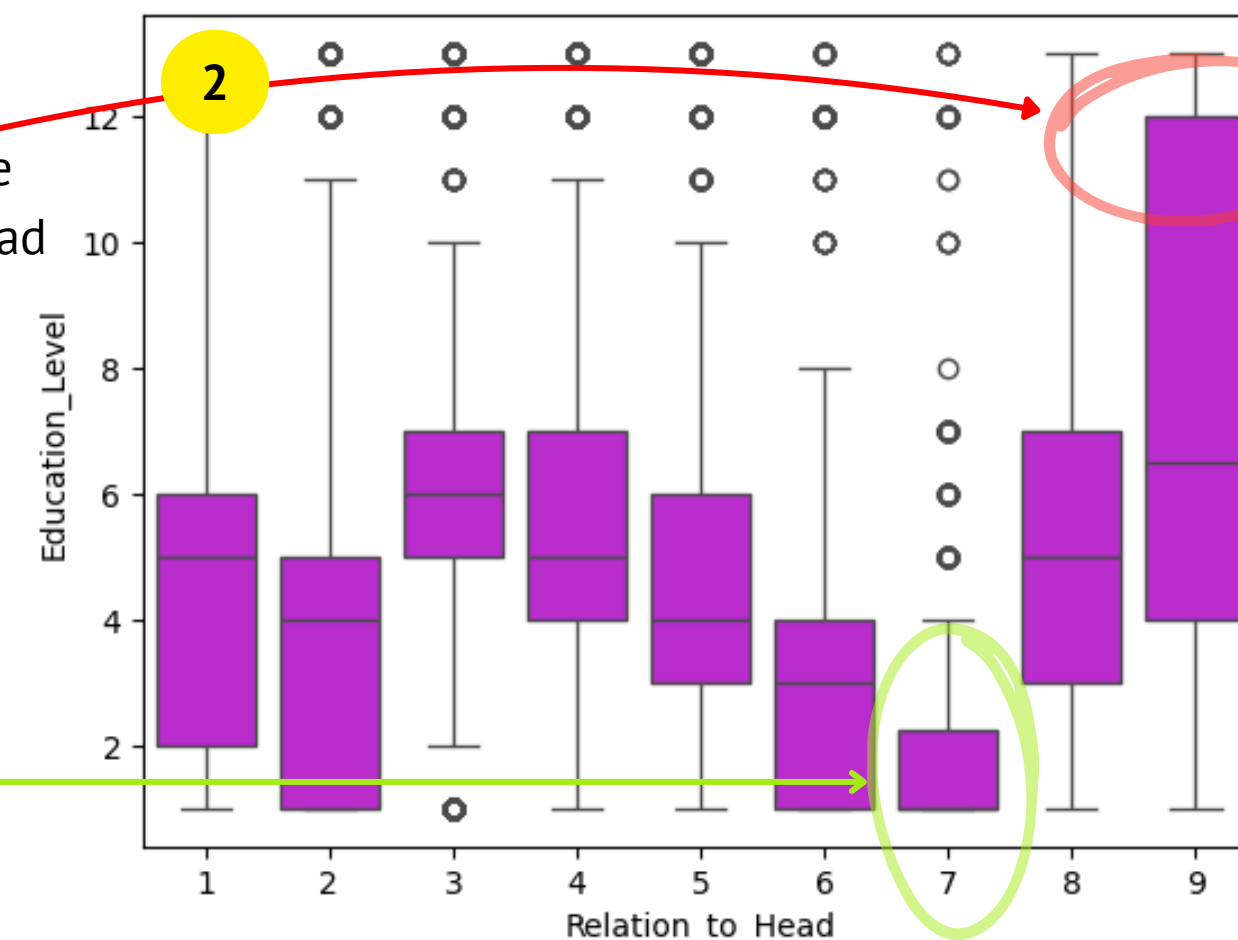

| Patameter | Marital Label      |
|-----------|--------------------|
| 1         | Married            |
| 2         | Unmarried          |
| 3         | Widow              |
| 4         | Divorced/Separated |

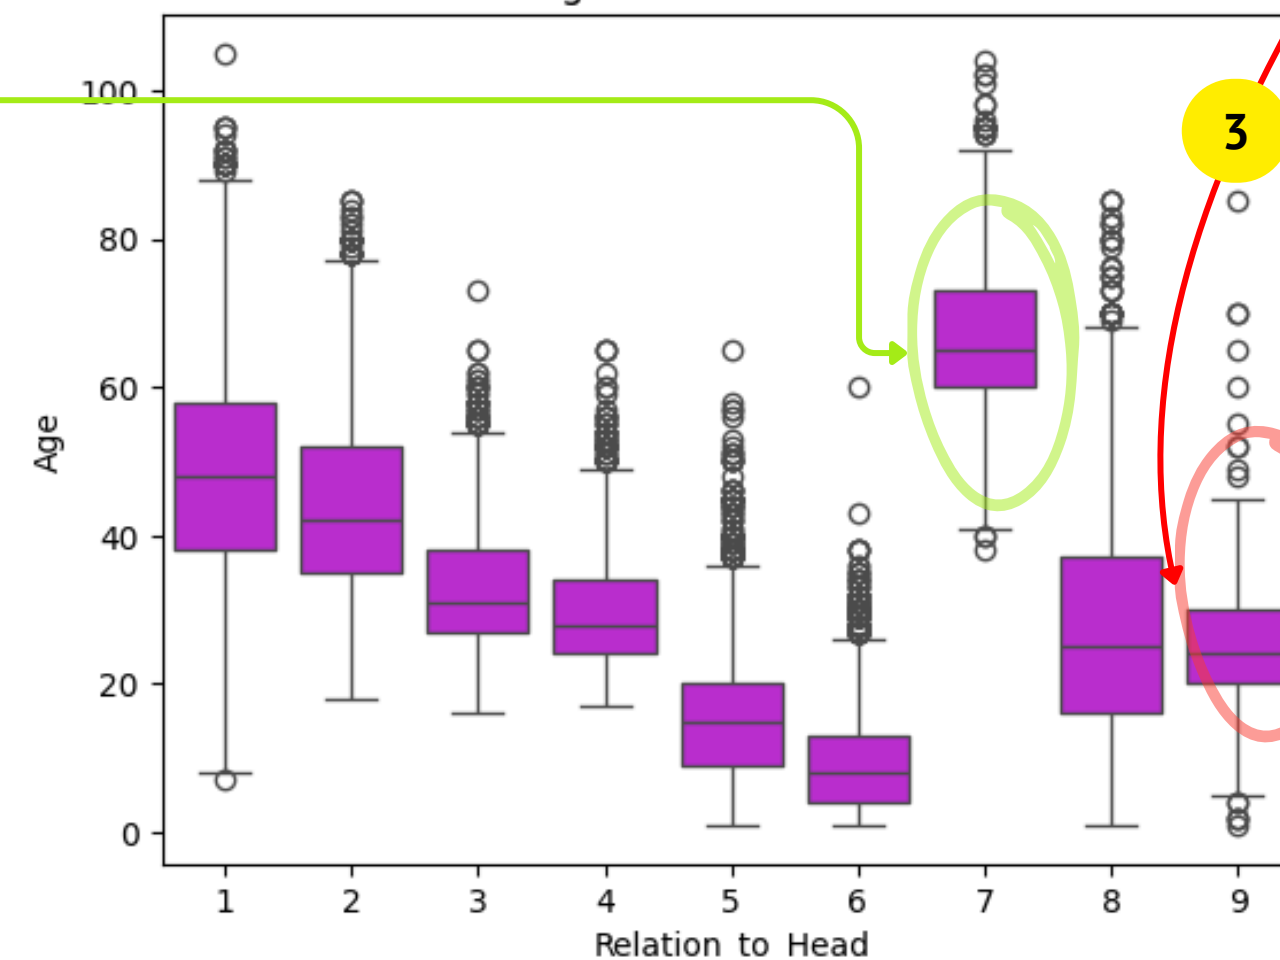

Away from home and family member

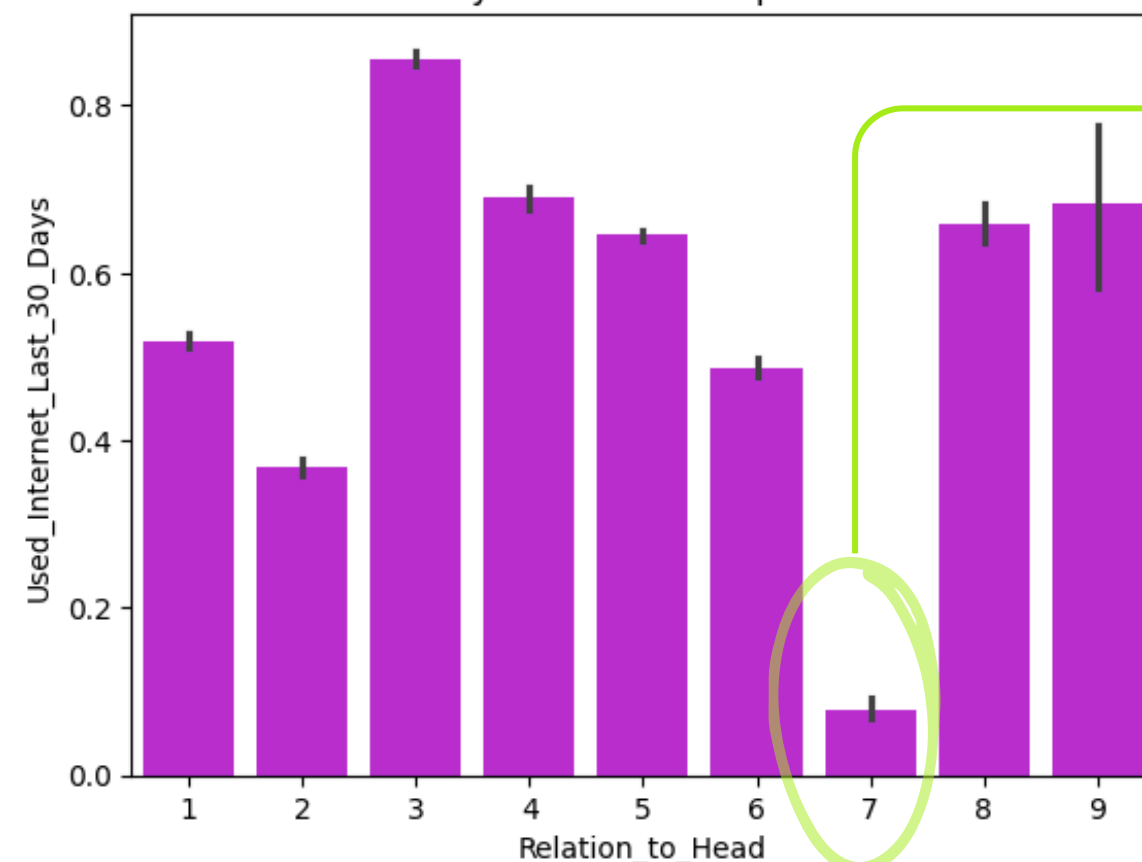

Education Level & Head

Age & Rational Head

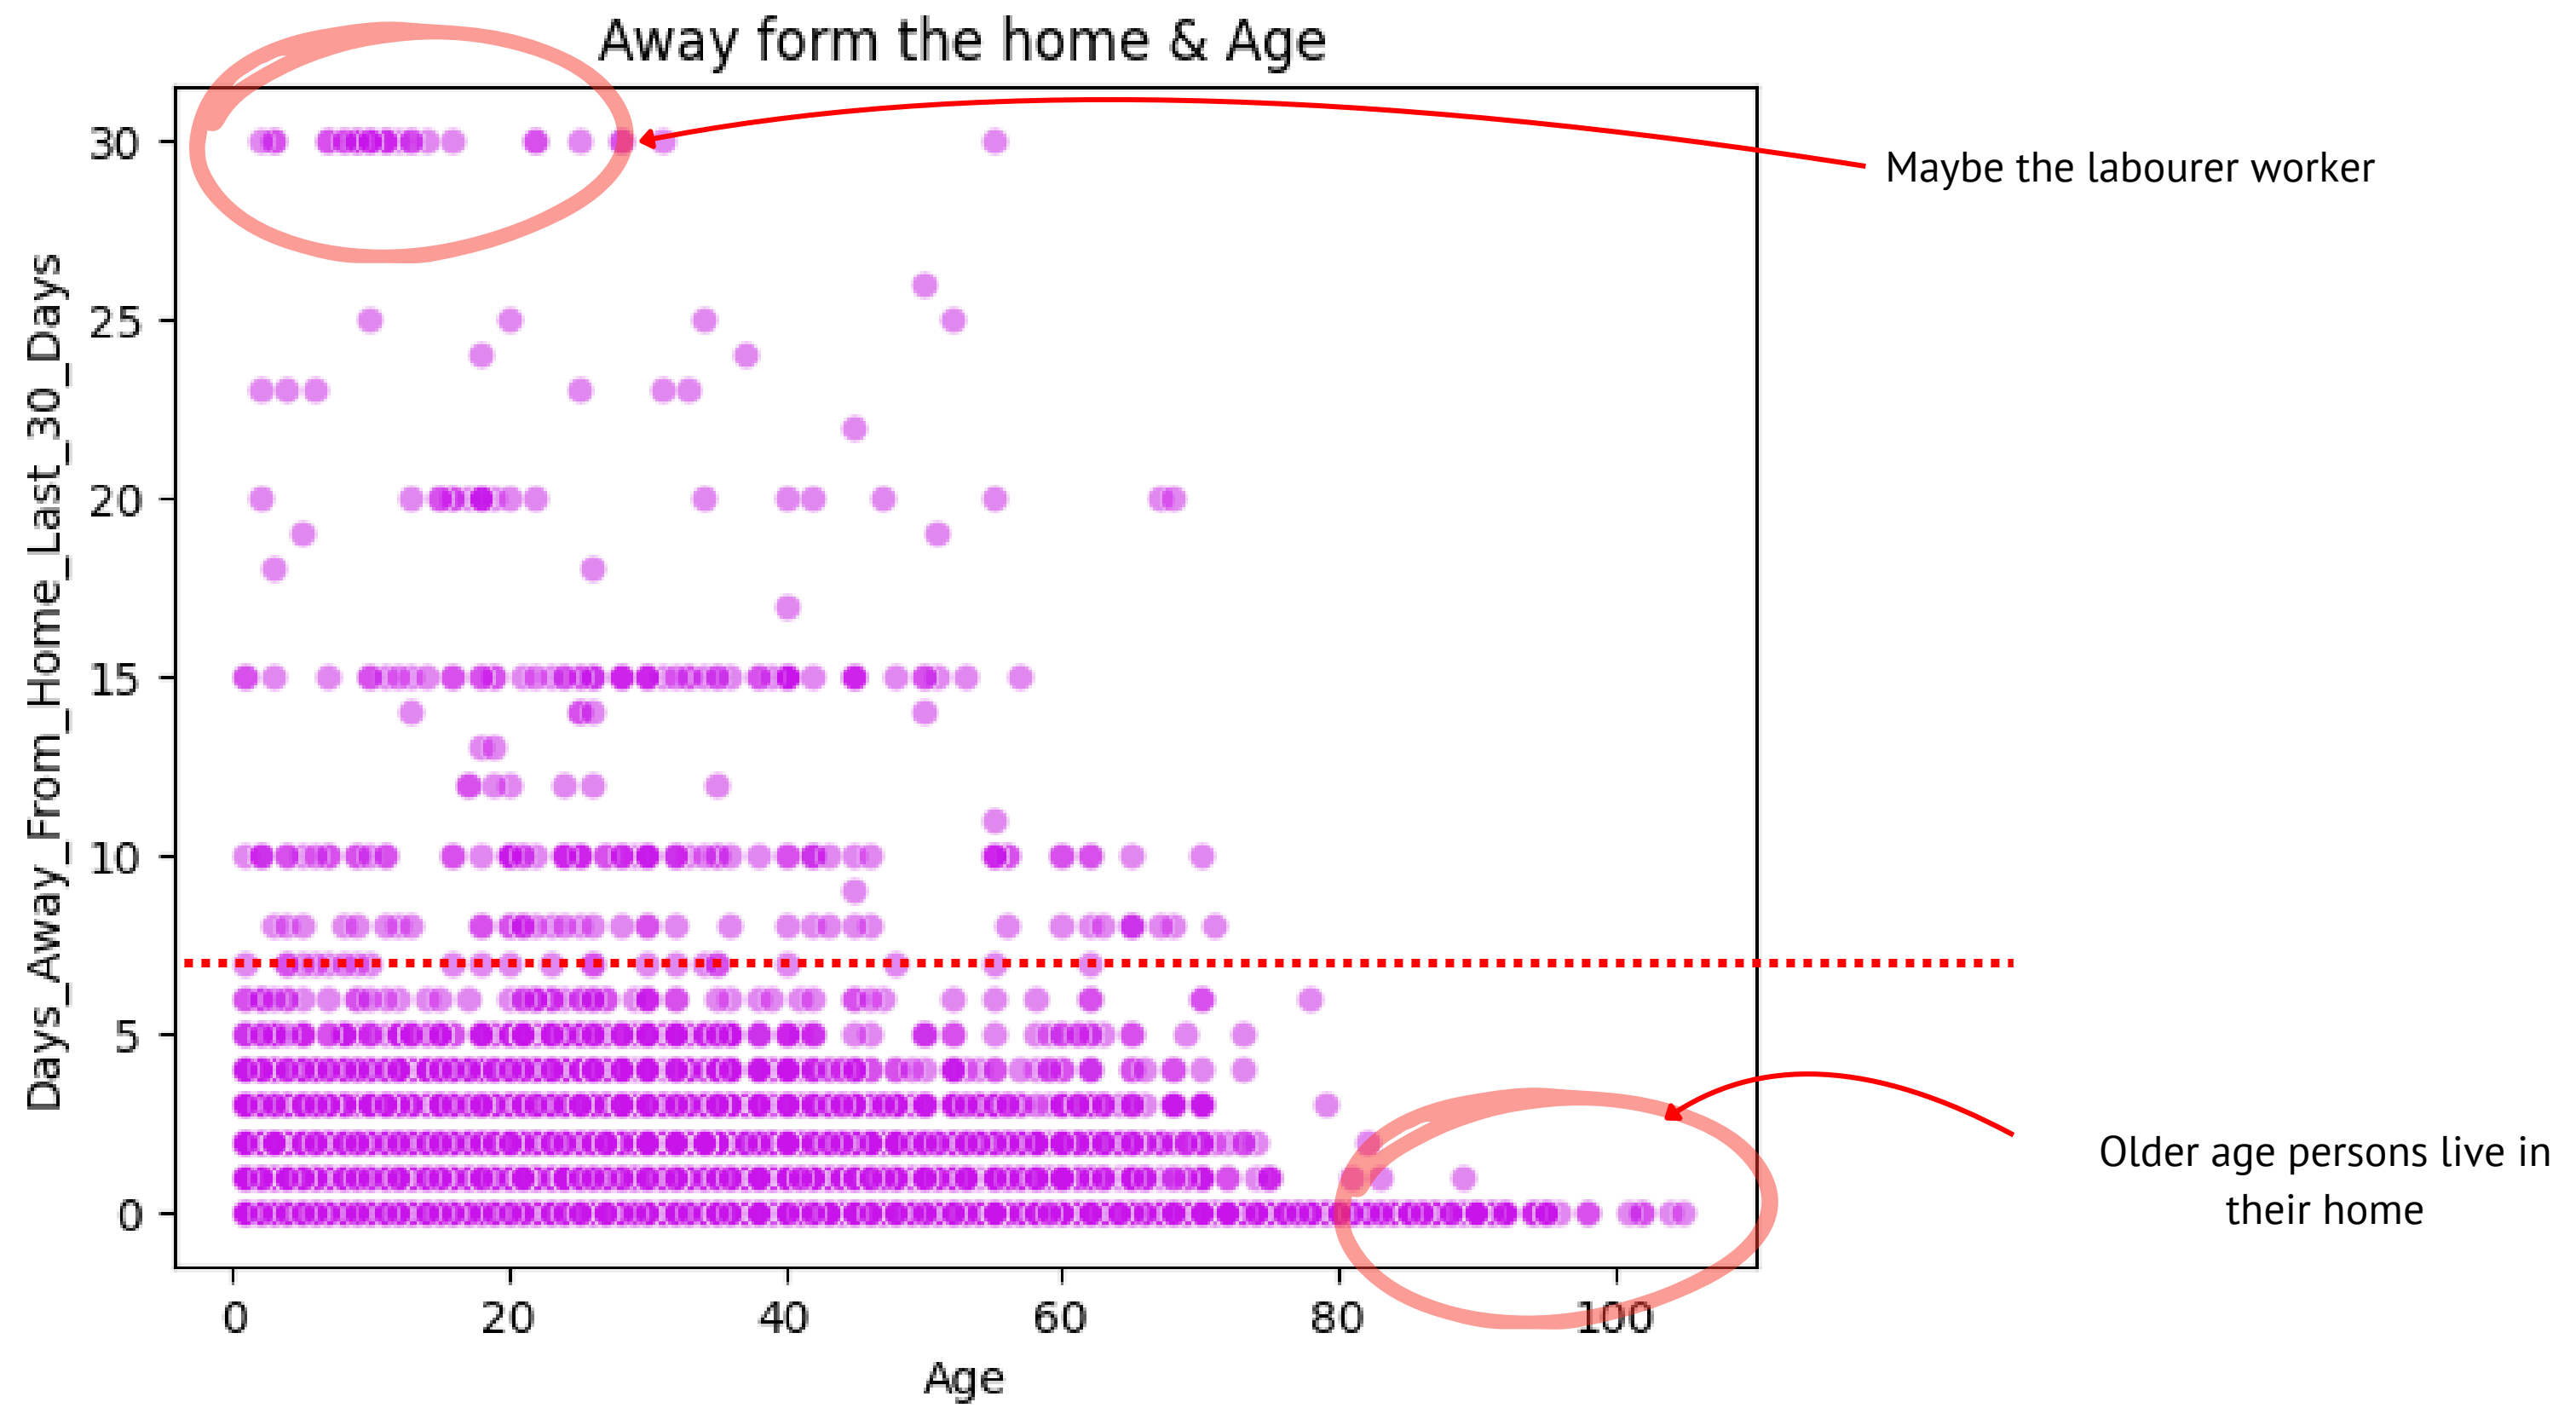

Intent used by no of member present in Home

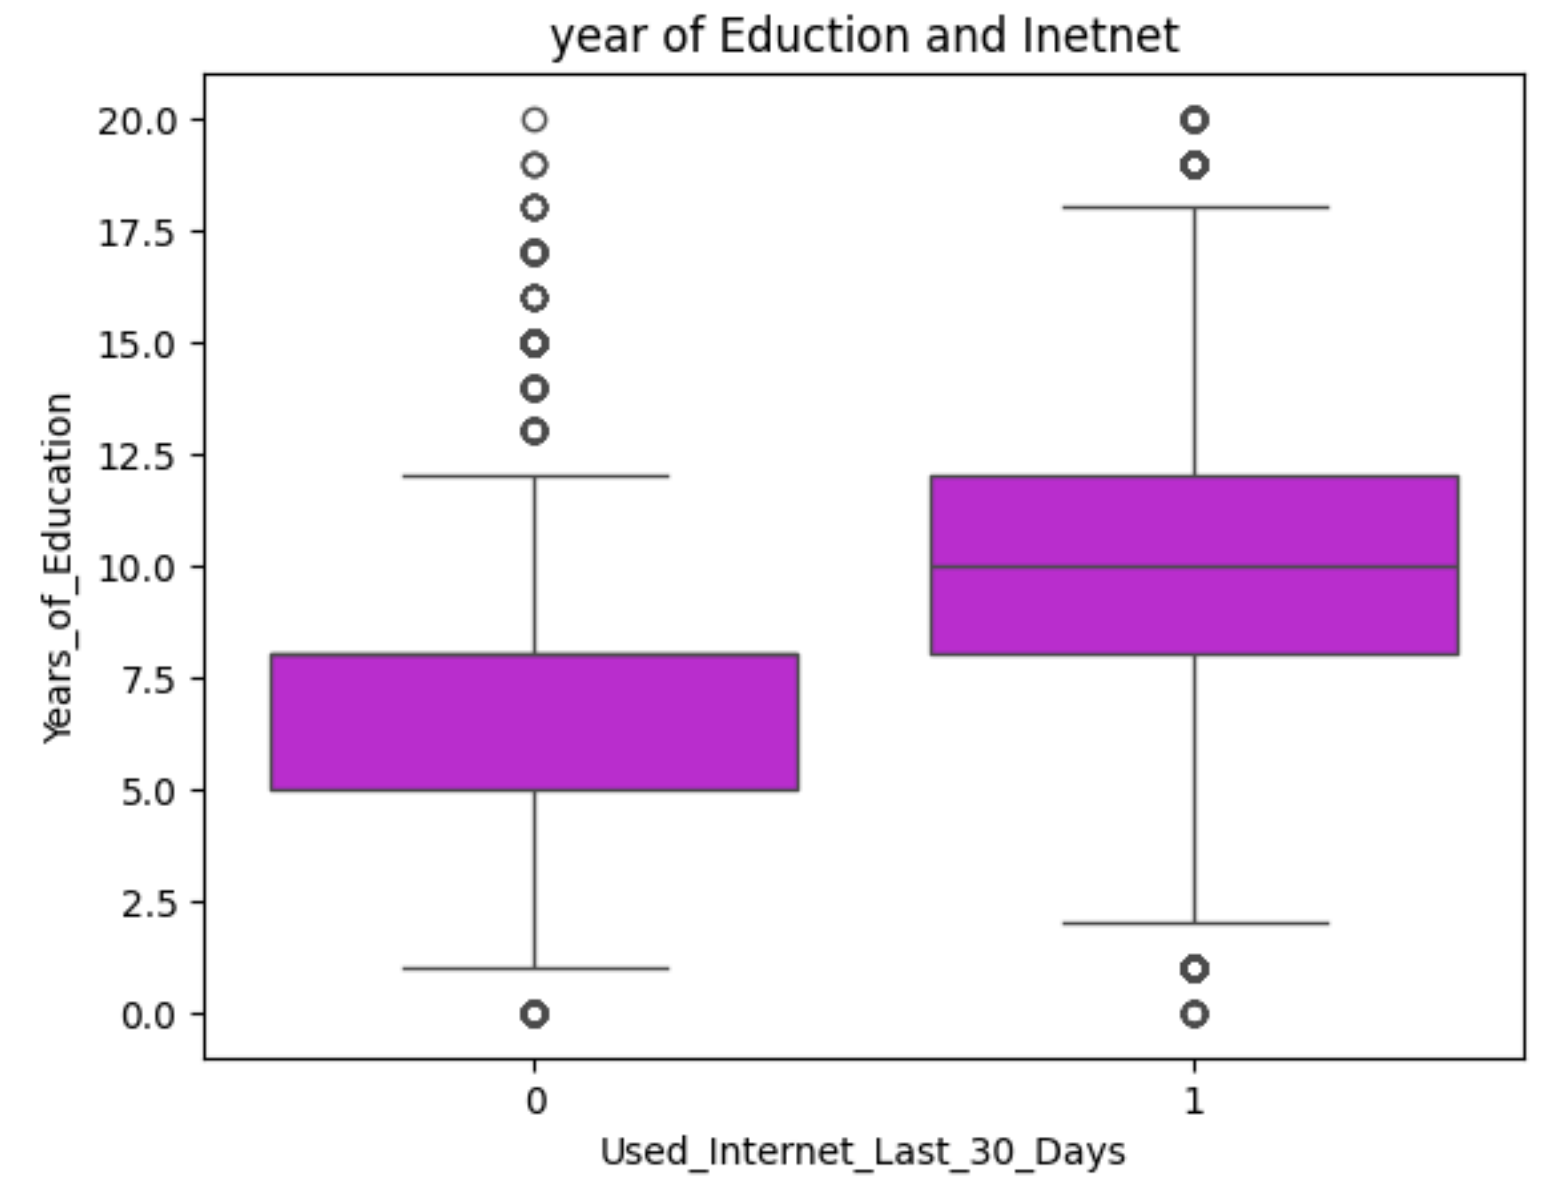

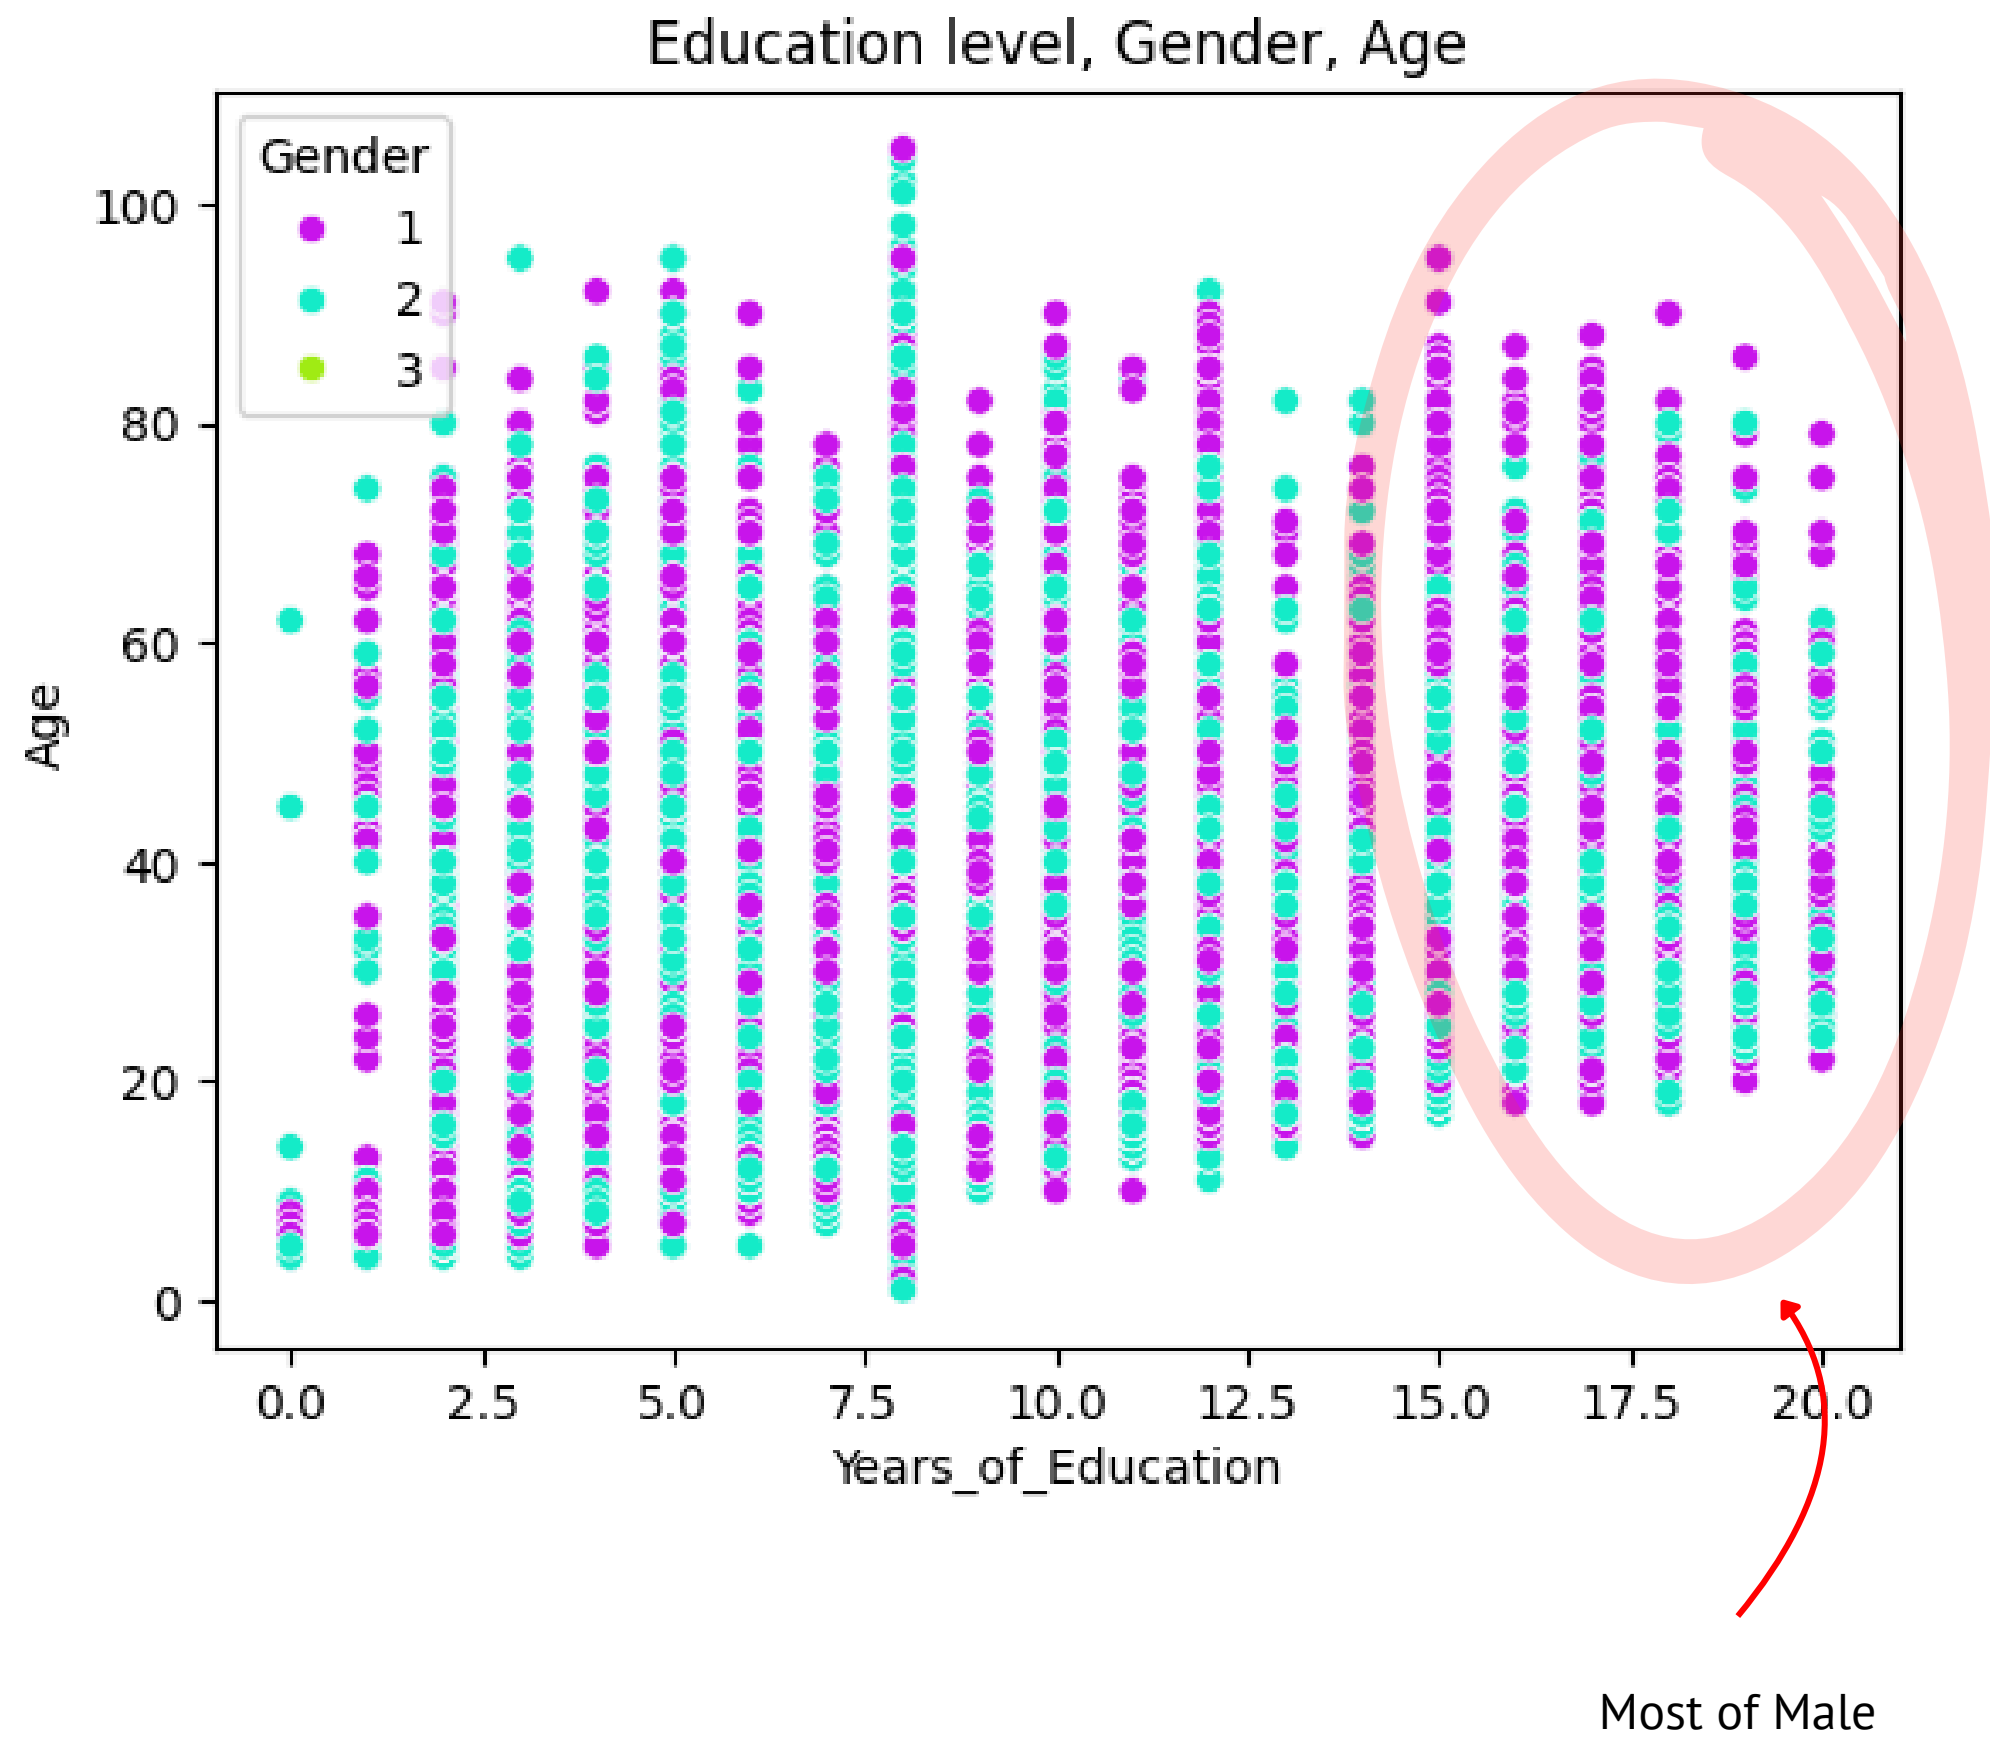

**Family member 7**

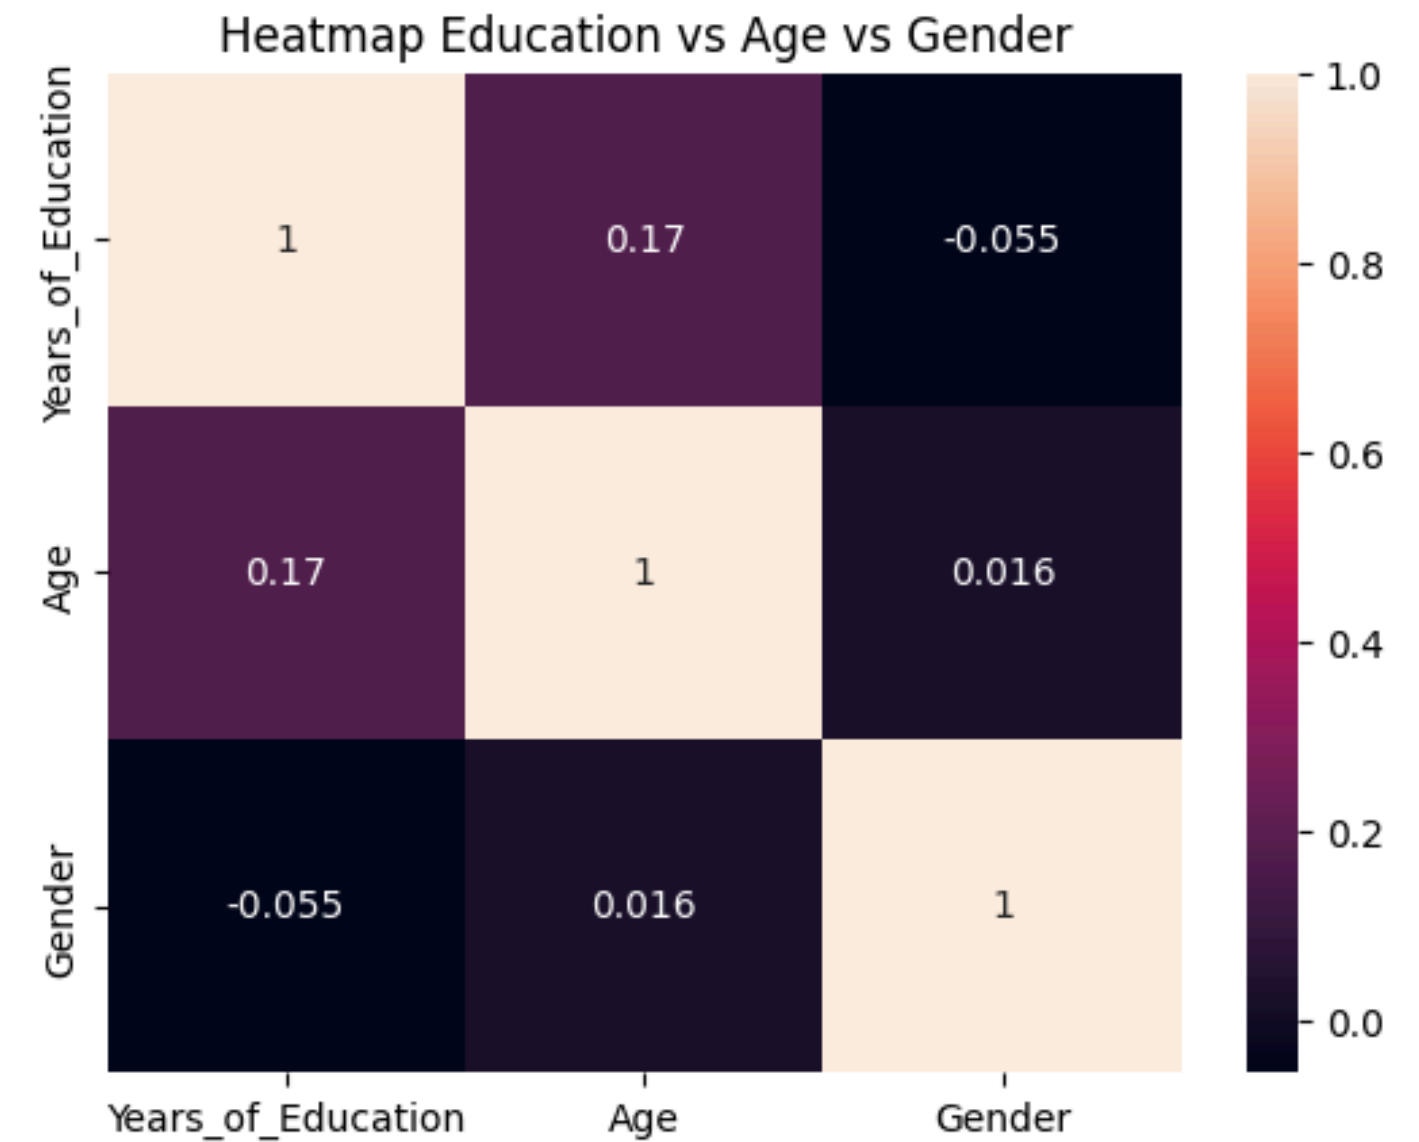

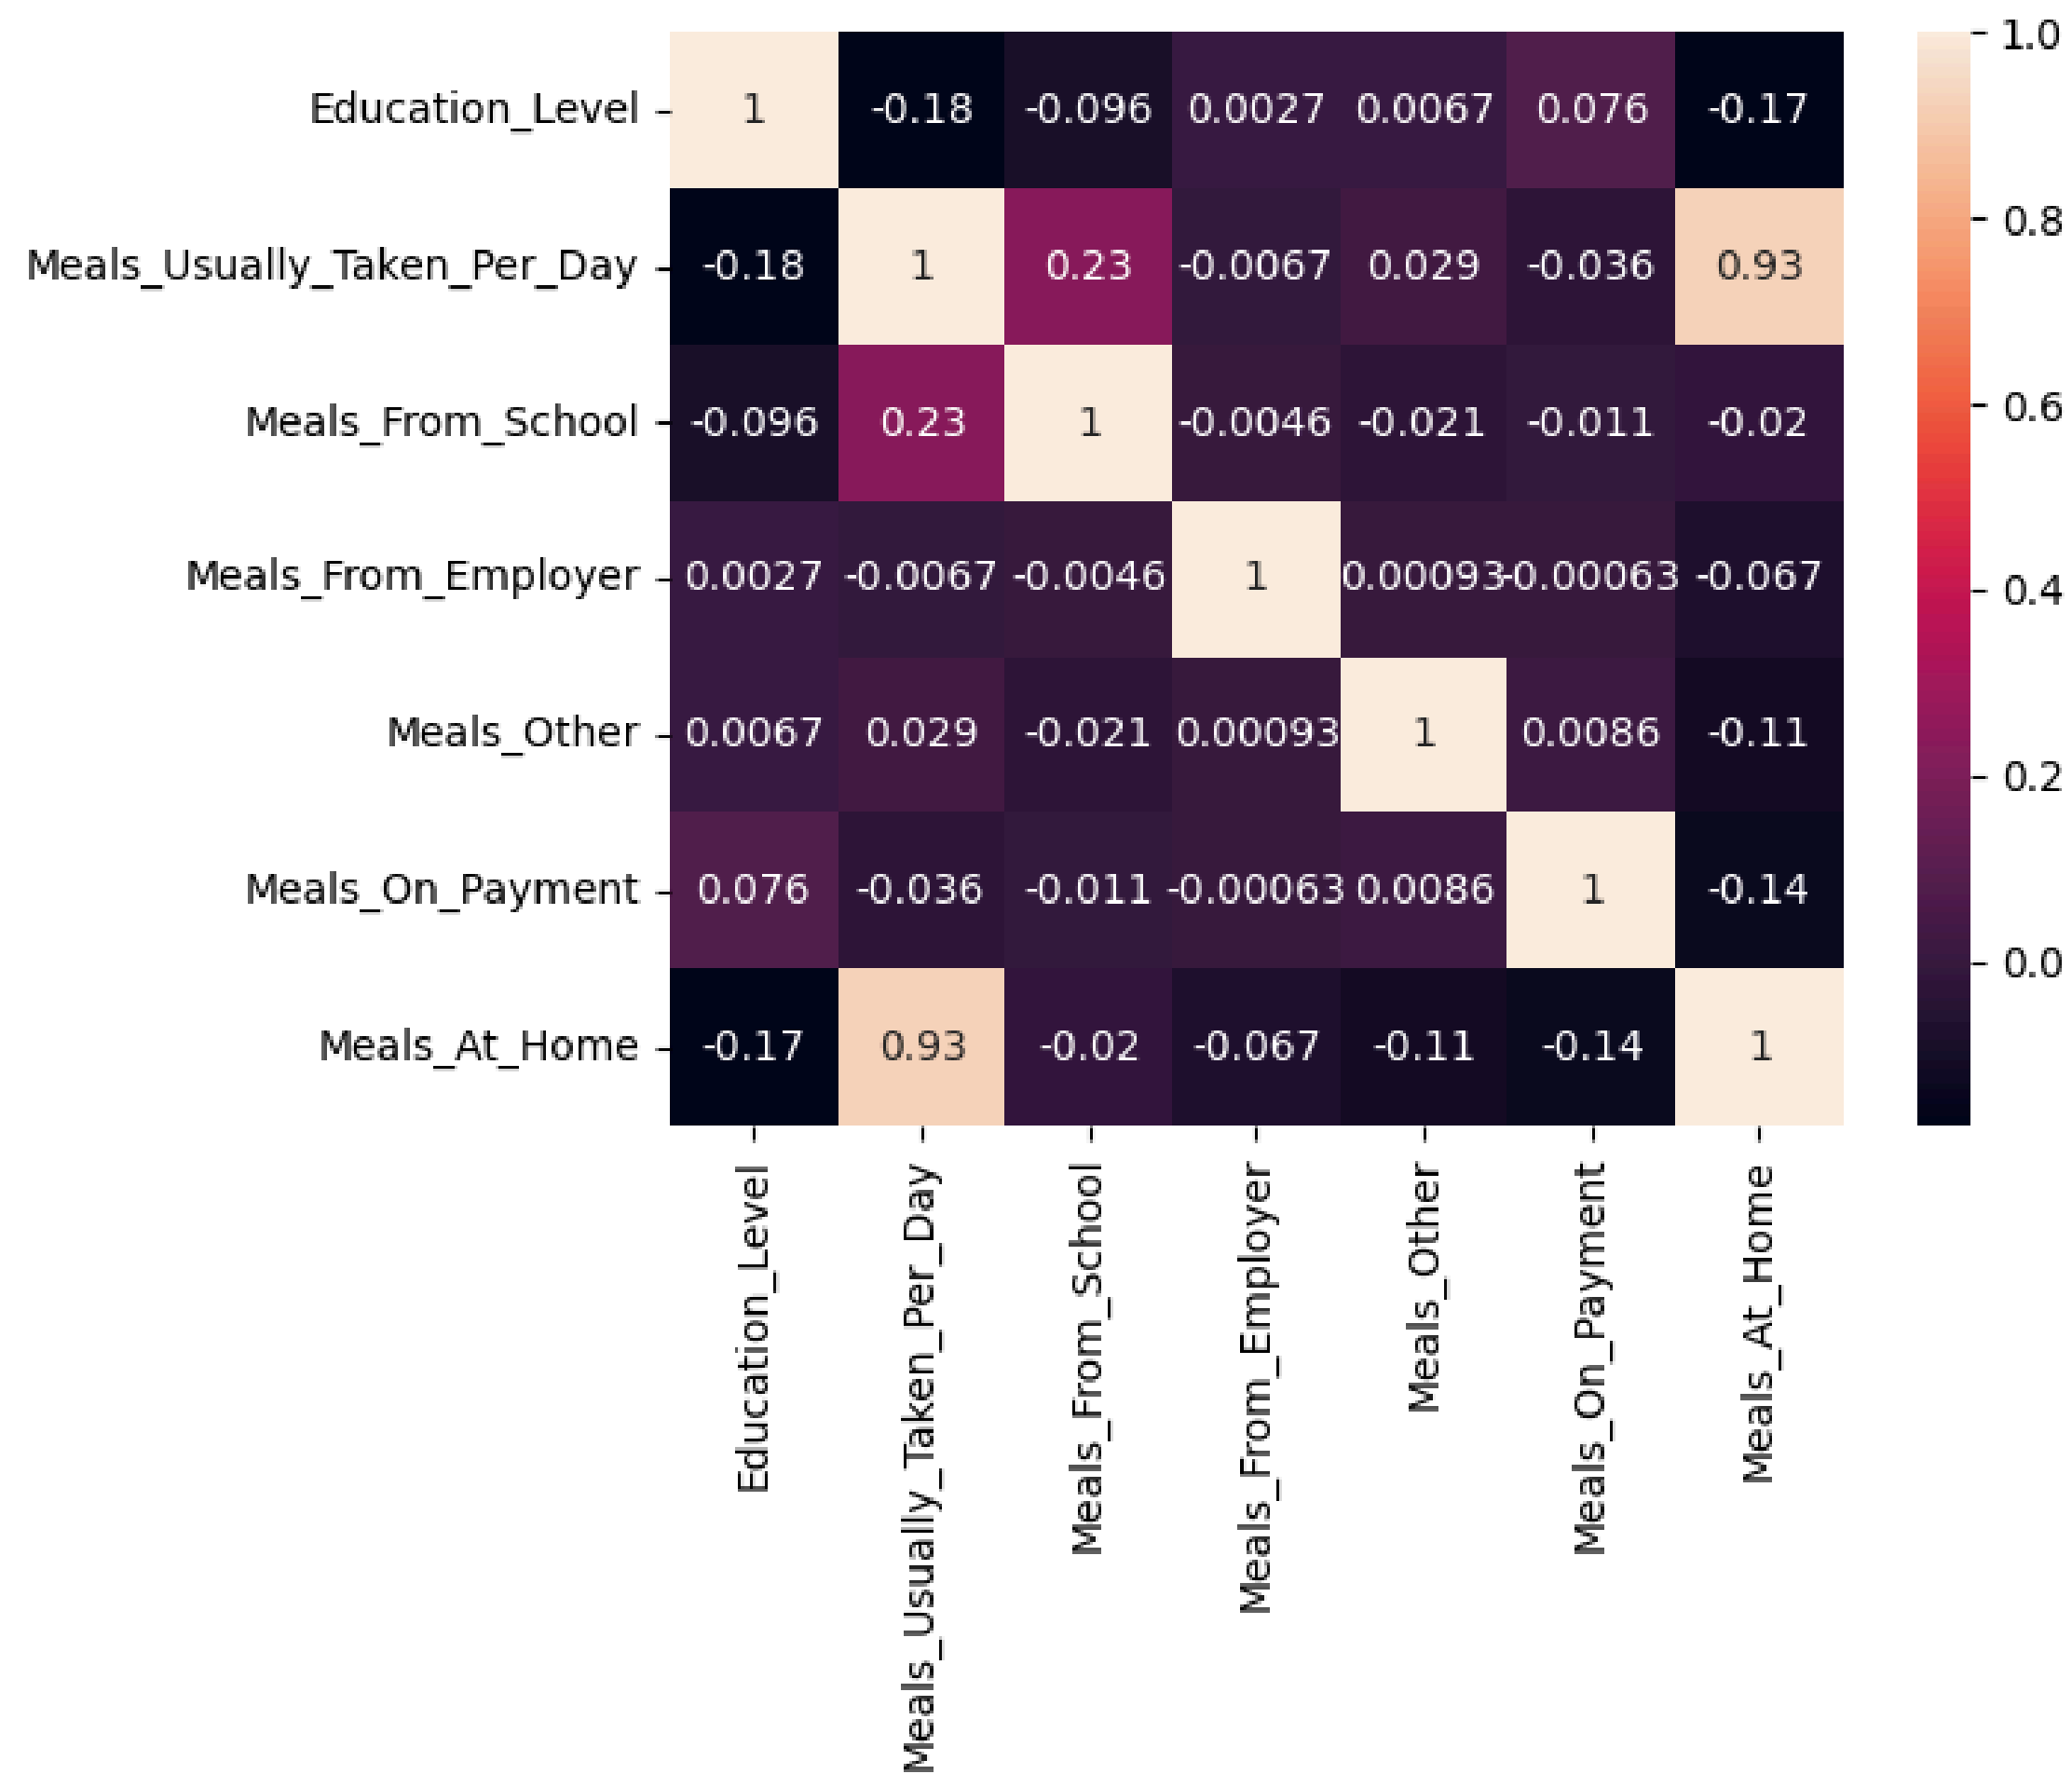

If a family member is 7, then

- They used less internet
- They are less educated
- But they live more than all in our dataset

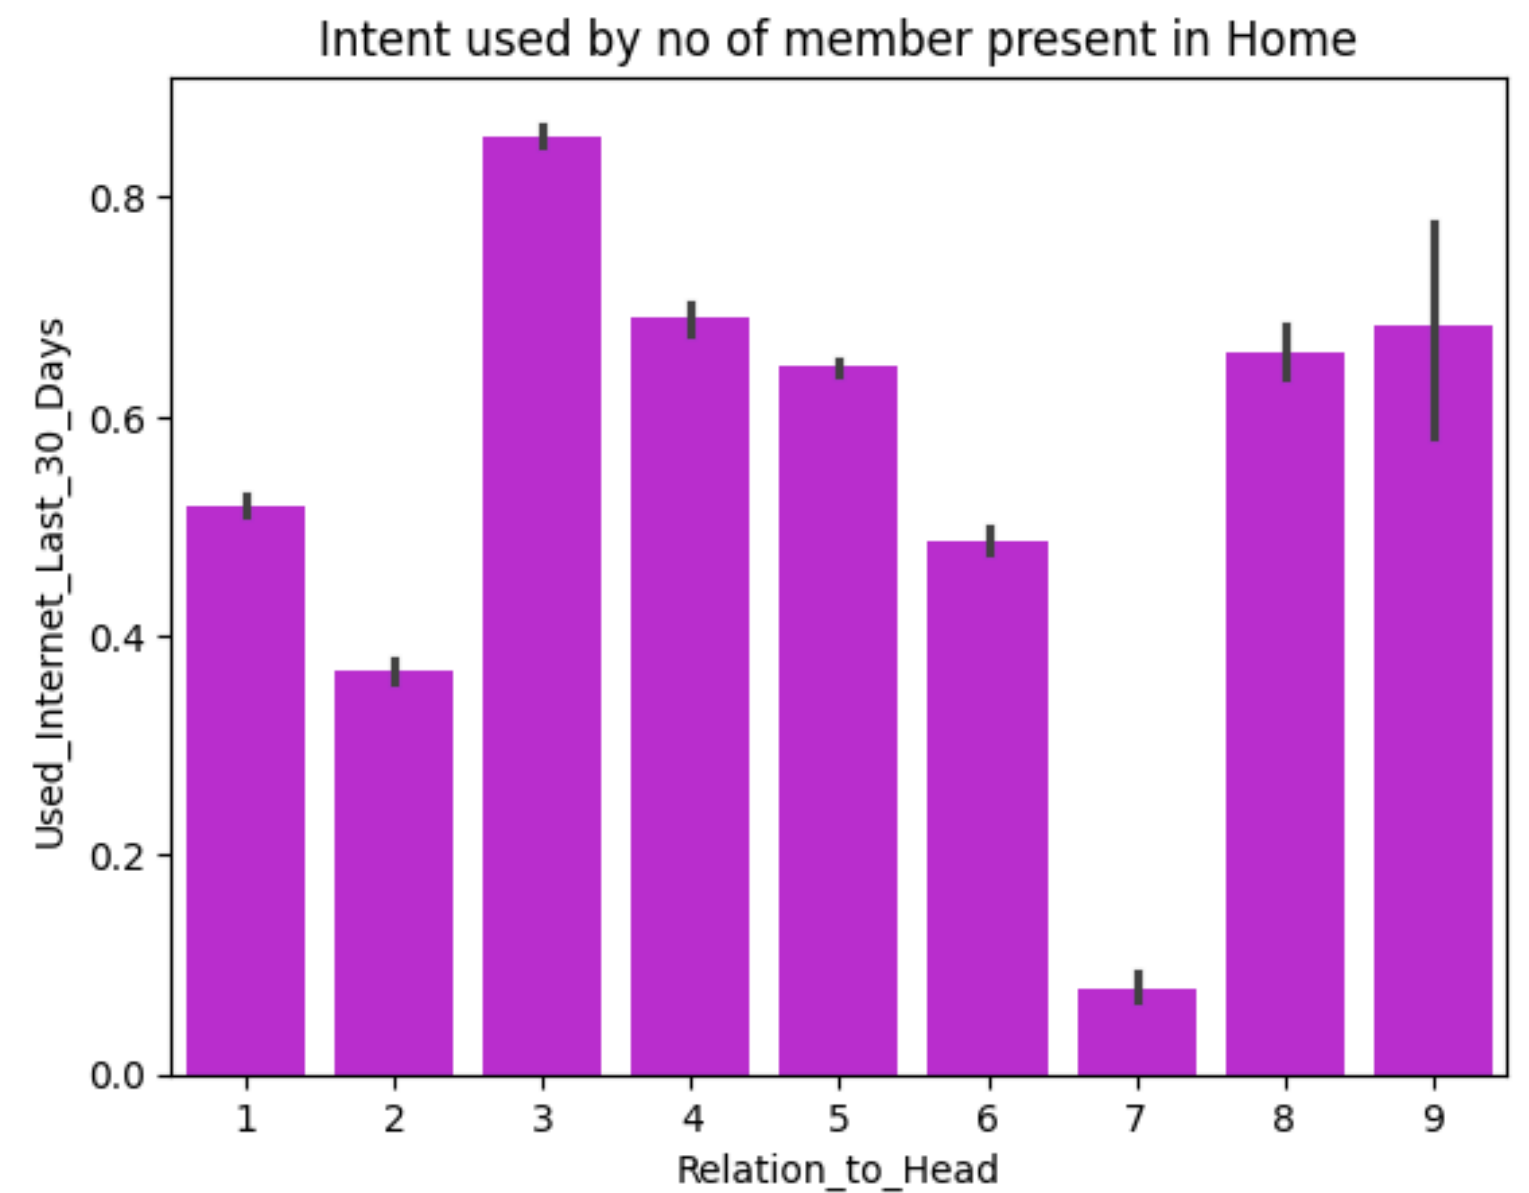

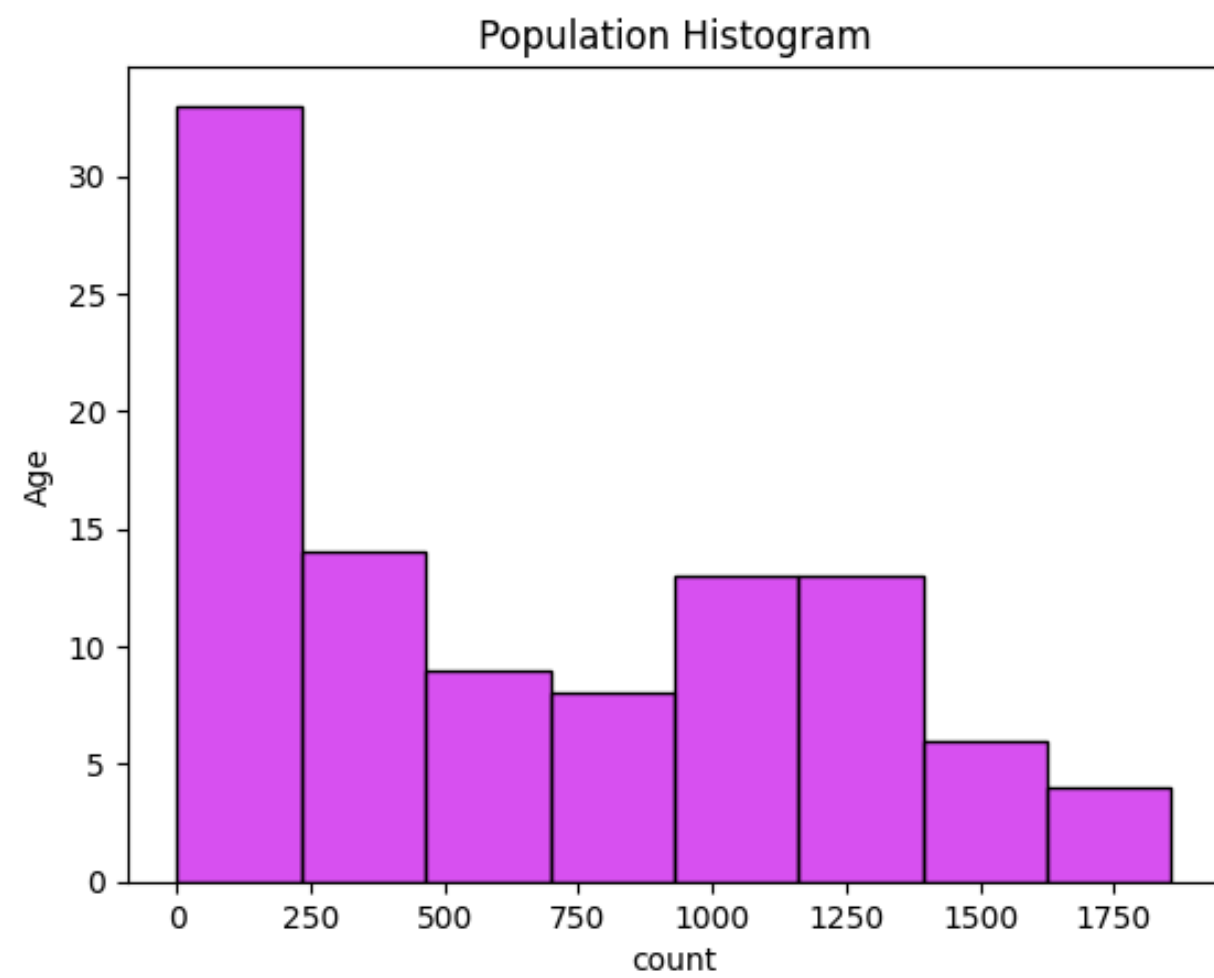

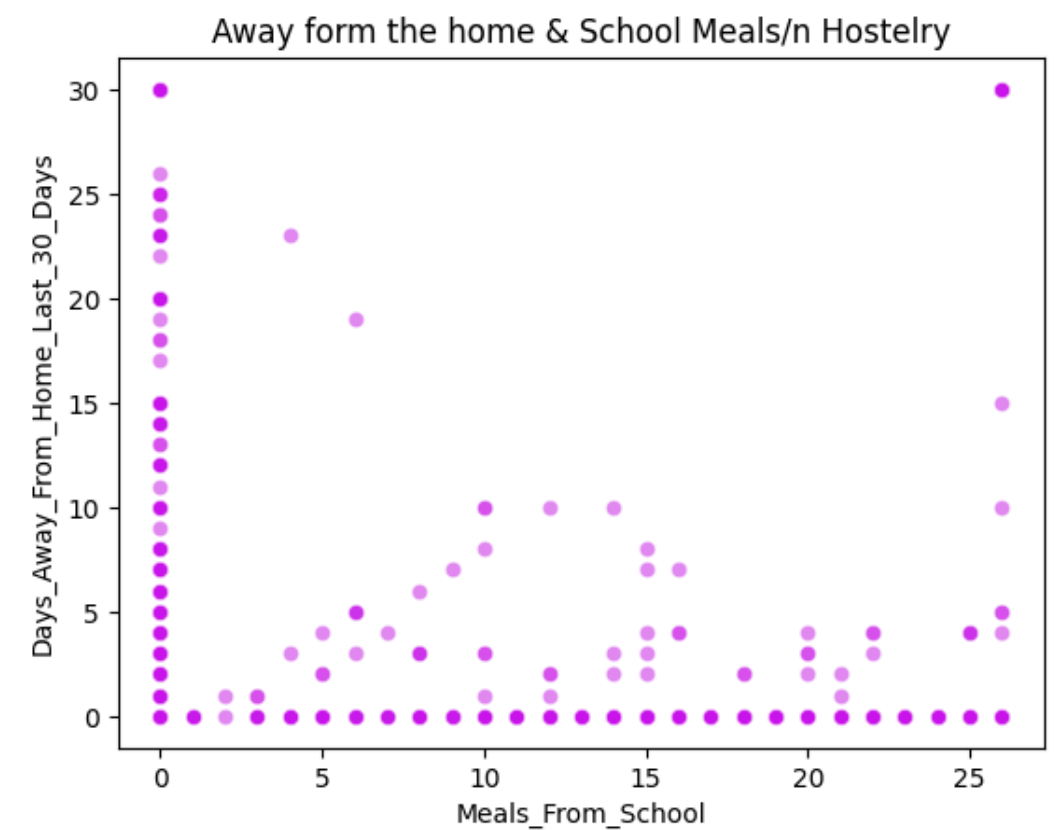

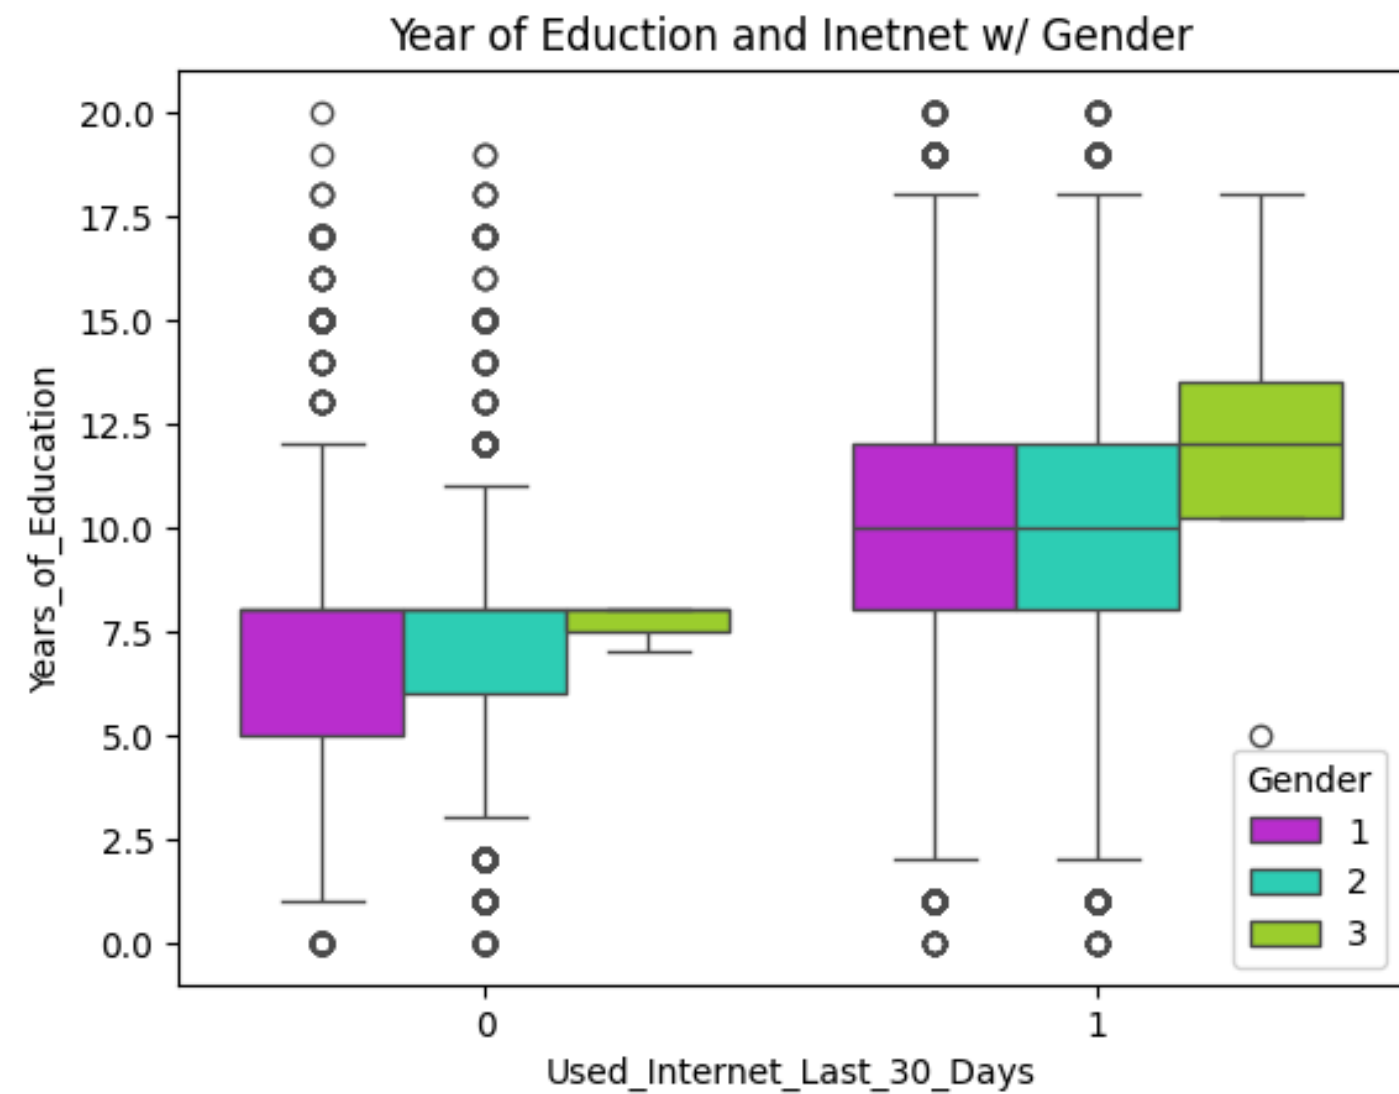

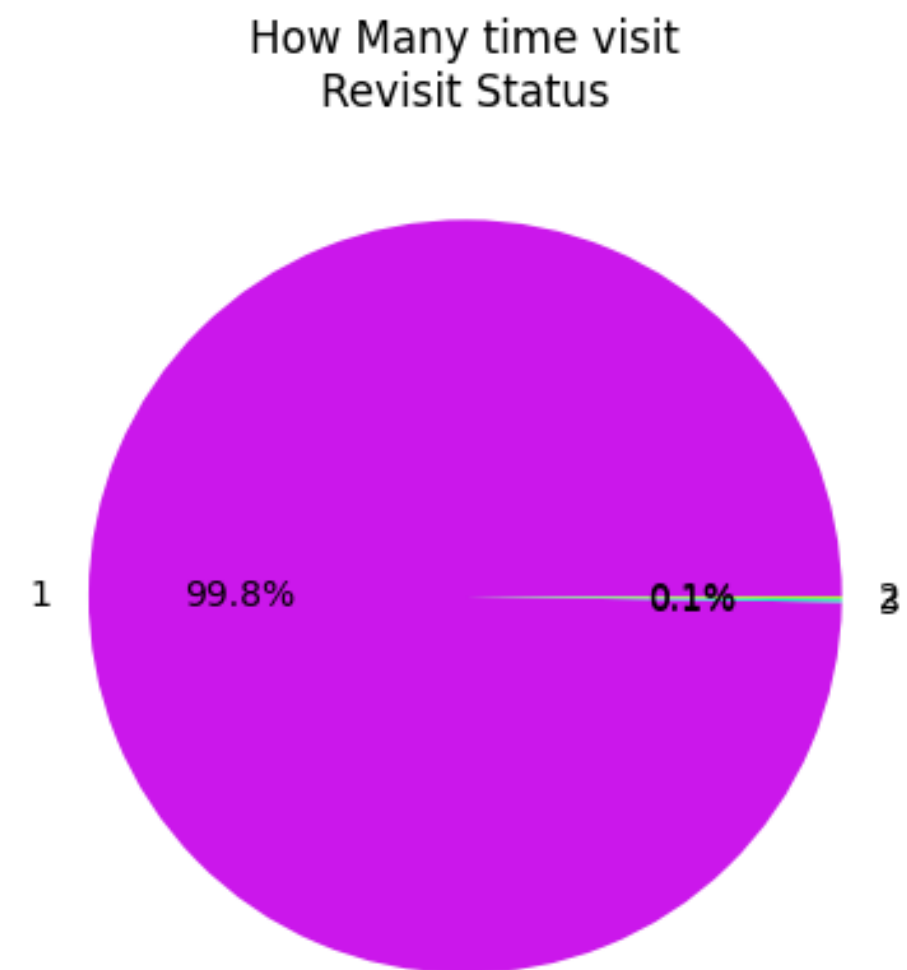

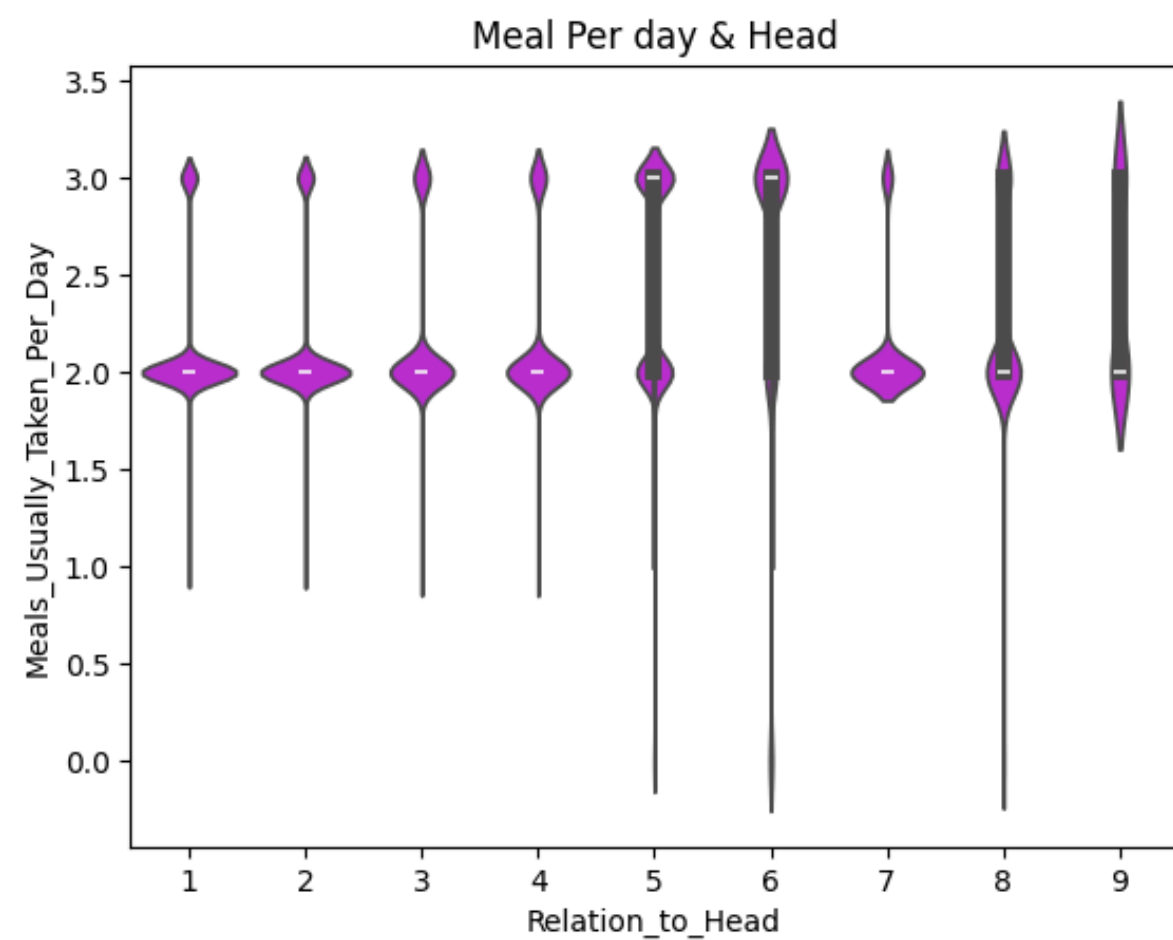

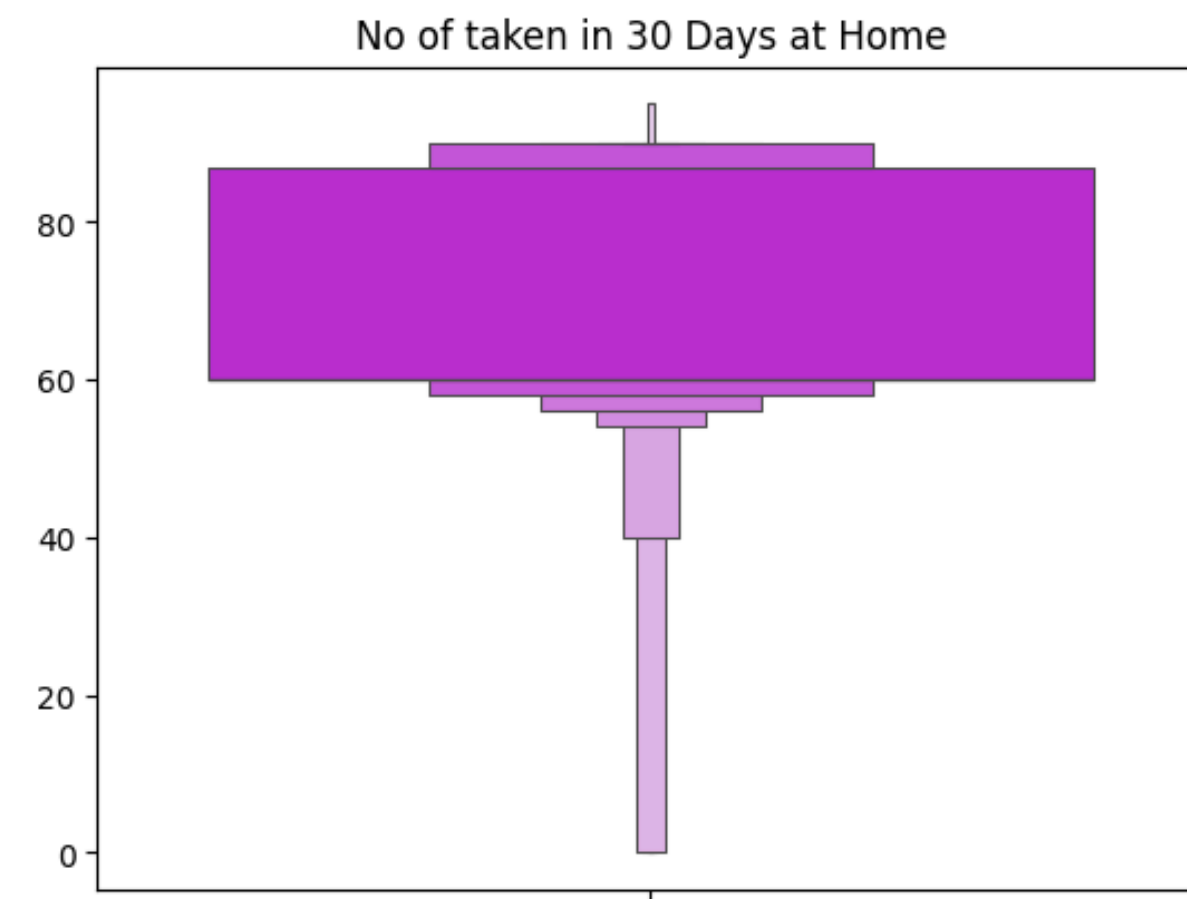

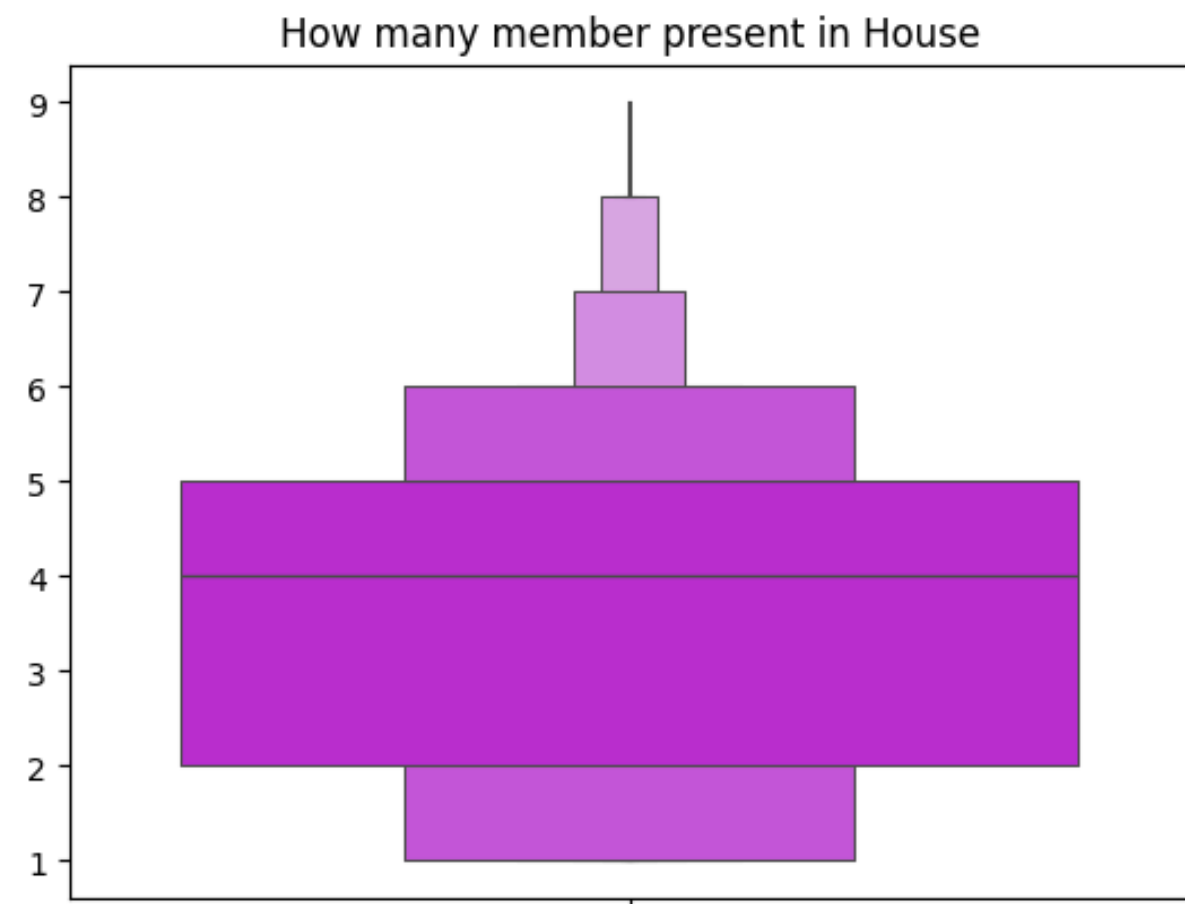

**Darker** shades of red typically represent stronger **positive correlations**, meaning that as one variable increases, the other tends to increase as well.
